# **JULY 2002 STATUS OF FORCES SURVEY OF ACTIVE-DUTY MEMBERS: TABULATIONS OF RESPONSES**

## ***Introduction to the Survey***

The *Human Resources Strategic Assessment Program* (HRSAP), located at Defense Manpower Data Center (DMDC), consists of both Web-based and paper-and-pencil surveys to support the personnel information needs of the Under Secretary of Defense for Personnel and Readiness. These surveys assess the attitudes and opinions of the entire Department of Defense (DoD) community—active, Reserve, civilian employees, and family members—on a wide range of personnel issues. The Web-based survey program, known as the *Status of Forces Surveys* (SOFS), provides timely data on active, Reserve, and civilian members. The SOFS Web surveys are short and limited to a few topics. There are nine SOFS Web surveys a year, with three cross-sectional samples of each population—active-duty members, Reserve component members, and DoD civilian employees. The paper-and-pencil surveys are used to obtain data on sensitive topics (e.g., sexual harassment) and from populations who have limited Internet access (e.g., spouses of active and Reserve members).

This report contains tabulations of responses from the first active-duty SOFS Web survey, conducted July 8 to August 13, 2002. This introduction (1) summarizes the survey content, (2) defines the total population surveyed and the subgroups used in tabulations of responses, (3) summarizes the survey methodology,<sup>1</sup> and (4) provides details on how to use the tabulations. The tabulations and a copy of the survey follow this introduction.

## ***Survey Content***

The overarching topics for *July 2002 Status of Forces Survey of Active-Duty Members* were satisfaction and retention. The survey was subdivided into 10 topic areas as follows:

1. *Background* – Questions necessary for creating the reporting categories used in the tabulation volume including Service; paygrade; education; marital status; spouse employment status; race/ethnicity; dependents; and location (both geographic and on/off base).
2. *Career Intent* – Questions on current career status, future career plans, commitment to serve, and significant-other support for future service.
3. *Satisfaction With Aspects of Military Service* – Questions on lifestyle, opportunities, and morale.

---

<sup>1</sup> Details on survey methodology are reported by DMDC (In preparation).

4. *Readiness* – Questions on individual and unit preparedness, and leadership and management issues.
5. *Satisfaction With Assignments and Travel* – Questions on both temporary and permanent assignments.
6. *TEMPO* – Questions on hours worked, time away from permanent duty station, and the impact of time away on career intentions.
7. *Satisfaction With Pay and Benefits* – Questions on various types of compensation, Service members' financial status, and spouse employment.
8. *Satisfaction With Quality of Life and Family Programs* – Questions on personal/family time and on-base programs.
9. *Overall Satisfaction* – Questions on more global components of satisfaction.
10. *Other Background Information* – Questions on parents and siblings.

### ***Population and Reporting Categories***

The target population for all active-duty SOFS consists of (1) active-duty members of the Army, Navy, Marine Corps, and Air Force, (2) having at least 6 months service at the time the questionnaire is first fielded, (3) below flag rank when the sample is drawn six months prior to the survey, and (4) excluding National Guard and Reserve members in active-duty programs. Results are presented for the total population and by a variety of reporting categories. To form the reporting categories for the tabulations, respondents are classified primarily by survey self-report. If the self-reported data are missing, then DMDC's Active Duty Master Edit File data at the time of sampling (typically 6 months before survey administration) are used to impute the subgroup classification. Definitions for the reporting categories follow:

- *Officers* – The *Officers* subgroup includes warrant officers (W1 – W5) and commissioned officers (O1 – O6).
- *Race/ethnicity* – Self-report questions are consistent with requirements of the Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (1997). *Total Minority* includes all persons marking one or more of the races other than White and/or marking that they are Spanish/Hispanic/Latino. *Non-Hispanic Black* includes persons marking only Black or African American and not reporting being Spanish/Hispanic/Latino. *Hispanic* includes anyone reporting being Spanish/Hispanic/Latino, regardless of how they answered the question on race.

- *Geographic location* – Geographic locations are collapsed into geographic regions as defined by the *Department of Defense Worldwide Manpower Distribution by Geographic Area* (DoD Washington Headquarters Services, 2001). The primary classification distinguishes *Overseas* from *US (Including Territories)*. *US (Including Territories)* includes those respondents with permanent duty stations located in the 50 states, District of Columbia, Puerto Rico, and United States territories or possessions. Within the *Overseas* classification, two regions can be reported separately: (1) *Europe*, which includes countries such as Bosnia-Herzegovina, Germany, Italy, Serbia, and the United Kingdom; and (2) *Asia and Pacific*, which includes countries such as Australia, Japan, and Korea.
- *Housing location* – Respondents are classified primarily for financial analyses based on their being provided housing directly or by allowance, rather than community analyses based on geographic location of the housing. From self-report data, *On Base* includes living in or aboard ship, in barracks/dorm/BEQ/UEPH/BOQ/UOPH<sup>2</sup> military facilities, or in on-base military family housing. *Off Base* includes living in military family housing off base, in privately owned or rented housing, or in privatized military housing. If the self-reported data are missing, then on base and off base are imputed from record data indicating whether the respondent does not or does qualify, respectively, to receive Basic Allowance for Housing (BAH) or Overseas Housing Allowance (OHA).
- *Education* – Respondents are classified based on self-reported educational attainment. *No College* includes anyone without some college credits. *Some College* includes those with some college credit, including a 2-year degree, but does not include those with a 4-year degree. *Four-year Degree* includes those with a 4-year degree and those with some graduate school, but no graduate or professional degree. *Graduate/Professional Degree* includes masters, doctorates, and first professional degrees.
- *Family status* – Respondents are classified based on self-reported marital status, spouse employment, and legally dependent children (ages 22 and under). Except for *Working Spouse*, missing data can be imputed from record data.<sup>3</sup> *Single* includes those who have never been married or are divorced/widowed and have not remarried. *Married* includes those who are married or legally separated. *With Child(ren)* includes those with dependent child(ren) aged 22 and under, regardless of where child(ren) live(s). *Working Spouse* includes those members whose spouse is working as measured by the U.S. Census Bureau's Current Population Survey (CPS) questions, including those in military service. *Dual Service Spouse* includes

<sup>2</sup> Bachelor/Base Enlisted Quarters, Unaccompanied Enlisted Personnel Housing, Bachelor Officers' Quarters, and Unaccompanied Enlisted Officers' Housing, respectively.

<sup>3</sup> Because there are no administrative record data for working spouses, this category cannot be imputed.

military members married to (including separated from) another military member (active or Reserve components).

### ***Survey Methodology***

The survey administration process began in May 2002, with the mailout of notification letters to sample members. This notification letter invited survey participants to log onto the survey Web site and provide background information and e-mail address(es) for future correspondence. A reminder letter was mailed to sample members who had not logged onto the survey Web site prior to the activation date of July 8, 2002. Throughout the administration period, additional e-mail and postal reminders were sent to encourage survey participation. The survey field closed on August 13, 2002.

Single stage, nonproportional stratified random sampling<sup>4</sup> procedures were employed to ensure adequate sample sizes for the reporting categories. The sample consisted of 37,918 individuals drawn from the sample frame constructed from DMDC's December 2001 Active Duty Master Edit File. Sampled members were flagged as ineligible (n=1,499, 4.0% of the sample) and were excluded from all survey mailings if they were ineligible for benefits in the March 2002 Defense Enrollment Eligibility Reporting System (DEERS) Medical Point-in-Time Extract (PITE). Members of the sample also became ineligible if they indicated in the survey or by other contact (such as telephone calls or e-mails to the data collection contractor) that they were not in active-duty service as of the first day of the Web survey, July 8, 2002 (n=117, 0.95% of responses).

Completed surveys (defined as at least 50% of the questions answered) were received from 11,060 eligible respondents. The overall weighted response rate for eligibles, corrected for nonproportional sampling, was 32%. Data were weighted to reflect the population of interest. These weights reflect (1) the probability of selection, (2) a nonresponse adjustment factor to minimize bias arising from differential response rates among demographic subgroups, and (3) a poststratification factor to force the response-adjusted weights to sum to the counts of the target population as of the month the sample was drawn and to provide additional nonresponse adjustments.

Table 1 shows the number of respondents and the portion of total respondents in each reporting group. Also shown are the estimated number of members and the portion of total members in each reporting group. Differences in the percentages of respondents and population for the reporting categories reflect differences in the number sampled as well as differences in response rates.

---

<sup>4</sup> In stratified random sampling, all members of a population are categorized into homogeneous groups. For example, members might be grouped by gender and Service (all male Army personnel in one group, all female Navy personnel in another, etc.). Members are chosen at random within each group. Small groups are oversampled in comparison to their proportion of the population so there will be enough respondents from small groups to analyze. Weights are generated so that estimates from the survey represent the population.

### ***Tabulation Procedures***

Tabulations for each question from the survey are shown on a set of facing pages. The text of the question and response options are shown at the top of the even-numbered page, with only the question repeated on the odd-numbered page. To compress the width of columns in the tables, the response options are shown with a number or with *DNA* (i.e., *Does not apply*) and then that number or DNA is used as the column heading for the responses. The central feature of the tabulations is the percentage of members choosing the response options indicated by the column heading.

Where an item lends itself to presentation as an average, that average is also shown as a number estimate and in a histogram. The histograms lend themselves to a quick scan for reporting groups that differ from other similarly defined groups. Where a true response continuum is available (e.g., number of children or years of service), the mean of that continuum is presented; in other cases, the responses are averages of the numeric scales presented with the response options. Where there is a simple binomial response like yes/no, only one percentage is presented. In this case, the histogram represents that percentage.

On each page of tabulations, the first column lists the reporting group shown in that row. The second column, *Percent Responding*, lists the portion of the reporting group represented in the estimates in that row. In most cases, if this percentage is not 100, it is reflecting item nonresponse, and the table notes that "Percent responding are Service members who answered the question."

Not all questions will apply to every respondent. Where possible, the Web survey is programmed to skip respondents over questions that do not apply to them. For example, Q36 (How many months has it been since your last PCS?) does not apply to those who have not had a PCS. The notation for this question indicates that the "Percent responding are Service members who answered the question and who had at least one assignment requiring a PCS move (Q35)."

The survey does not always skip respondents over questions that do not apply to them. This generally occurs in questions where the same scale is used to answer a number of sub-items. In the tabulations, *Does not apply* responses are typically included in the percentages in the *Percent Responding* column. For example, members are asked in Q45 to indicate the degree of satisfaction or dissatisfaction with a number of aspects of compensation and benefits. Respondents can also indicate for each benefit and source of compensation that it does not apply.

Special care is required to interpret results with a response option of *Does not apply* because respondents are not consistent in how they interpret the appropriate use of this response option. When the *Does not apply* response option is available, the tabulations present the data so that this option can be considered separate from or combined with other response options.

Respondents may use a neutral response instead of the *Does not apply* response or they may give a rating when logic tells us they should use the *Does not apply* response. An example of using a neutral response option, rather than *Does not apply*, is a respondent who chooses *Neither satisfied nor dissatisfied* as a response when the item is not applicable. A second example is a respondent who has no family member receiving benefits but gives a dissatisfied rating to express the belief that the rules are too restrictive and that a family member should be considered an eligible dependent.

Respondents may also use a “no” response instead of a *Does not apply* response. An example can be seen in Q37c (*For your most recent PCS move, were any of the following a problem? Temporary lodging experience*). Those who did not use temporary lodging would be expected to answer *Does not apply*, but some of them might have selected the response *Not a problem*. The conservative interpretation is to focus on the percentages of the applicable reporting category who indicated some degree of a problem and interpret the remainder to be the percent of the applicable reporting category who did not use, had no need for, or had no problem with temporary lodging.

Q37 is also an example of where particular care has to be taken to interpret responses because Q37 was (1) within a skip pattern and (2) had an individual item response of *Does not apply*. When this and similar items have an average presented, that average is more limited in scope than the percentages and that limitation is reflected in the notation on the table. The notation for items in Q37 indicates that the “Average is based on those who did not report the situation was not applicable.”

### ***Combining Information From Multiple Items***

Tabulations in this volume generally present data for individual survey questions. There are two types of exceptions. The first type of exception is where the results for multiple items are presented on a single set of pages for number of dependents and for experiences of financial difficulties.

- In Q16, members are asked how many dependents they have in each of six age ranges. For this question, the tabulations show the percentage of the reporting category with children in that age range. The averages shown on these pages are based only on those with at least one dependent and, therefore, show the average number of dependents for those who have dependents.
- In Q46, members are asked if they had experienced, in the past 12 months, each of seven indicators of financial difficulty. For each of the seven indicators, the tabulation pages for Q46 show the percentage of the reporting category who said they had experienced that indicator. The summary statistics shown on these pages are the percentages of the reporting categories who experienced at least one of the indicators.

The second type of exception pertains to constructed scales for spouse employment, race/ethnicity, organizational commitment, and unit cohesion.

- Q13-Q14 on race and ethnicity were combined and are reported in accordance with the Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (1997).
- Spouse employment indicators are derived from Q6-Q12 and are modeled on the items used to measure unemployment rates in the U.S. Census Bureau's Decennial Census and CPS. Two sets of tabulations are presented. In the first set, labor force participation is shown for the spouses of those in the reporting category. The four categories contain percentages of (civilian) employed, unemployed, not in the labor market, and Armed Forces member. Those not in the labor market include those who are permanently or temporarily not working or actively looking for work.<sup>5</sup> The second set of the data shows only those in the labor market. That is, the percent responding are married Service members who answered the items and whose spouses are in the labor market (civilian employed, unemployed, and in the Armed Forces). The unemployment rates shown in these tables are the percent of those who need or want to work and are unemployed. These rates are comparable to those reported monthly by the Bureau of Labor Statistics based on the CPS data.
- The SOFS Web surveys will report multiple-item measures that are found to be useful indicators for military and civilian personnel management. For the July 2002 Active-Duty SOFS, two such indicators are presented. Organizational commitment is measured by Q25a-Q25c. For additional information on the organizational commitment measure, please see Ormerod, et. al (in preparation). Siebold and Lindsay's (1999) unit cohesion measure is in Q31a-Q31d. In the tabulations, individual items for these scales are presented first; following the items is an additional set of tabulation pages showing the indicator computed from the scale items.

### ***Margins of Error***

The complex sample design required weighting to produce population estimates such as percentages. This differential weighting means that standard statistical software packages may not correctly calculate standard errors, variances, or tests of statistical significance.<sup>6</sup> This also means that the typical rules of thumb for interpreting how good an estimate is, such as the number of respondents, will overstate the reliability of the estimate.

By definition, sample surveys are subject to sampling error. Standard errors are estimates of the random variation around population parameters such as a

---

<sup>5</sup> Those who have not actively looked for work in the past 4 weeks are considered to be out of the labor market. This category includes some percentage of spouses who are in the midst of a PCS move and, therefore, only temporarily out of the labor market.

<sup>6</sup> For this report, variance estimates were calculated using SAS<sup>®</sup> PROC SURVEYMEANS.

percentage or mean. Estimates in these tabulations are reported with margins of error based on 95% confidence intervals. In order to compress the data display, a single margin of error is shown for the set of response options in a row—all of the 95% confidence intervals for the response options in the row are within the given margin of error. However, a specific margin of error is shown for a summary indicator like an average.

Estimates may also be unstable based on a small number of observations or large variance in the data or weights. For this reason, particularly unstable estimates were suppressed or annotated in the tabulations. The following annotations were used:

- ° indicates that no one in any reporting group selected that response option,
- \* indicates low precision, i.e., the relative standard error for that estimate was greater than 30%,
- NR indicates the estimate is Not Reportable because it was based on fewer than 30 respondents,
- † indicates the estimate was based on 30-59 respondents, and
- ‡ indicates low precision and the estimate was based on 30-59 respondents.

Note. Percent responding are Service members who answered the question, who did not say they were divorced, widowed, or never married (Q5). Dual Service Spouse includes traditional Reservists who drill approximately once a month. In calculating spouse employment status, an individual must have worked in the past week to be considered employed, therefore up to one quarter of traditional Reservists (without other employment) could be categorized as unemployed or not in the labor force.

Note. Percent responding are Service members who answered the question, who did not say they were divorced, widowed, or never married (Q5). Dual Service Spouse includes traditional Reservists who drill approximately once a month. In calculating spouse employment status, an individual must have worked in the past week to be considered employed, therefore up to one quarter of traditional Reservists (without other employment) could be categorized as unemployed or not in the labor force.
