Acknowledgments

Defense Manpower Data Center (DMDC) is indebted to numerous people for their assistance with the *2006 Survey of Active-Duty Spouses (2006 ADSS)*, which was conducted on behalf of the Office of the Under Secretary of Defense for Personnel and Readiness (OUSD[P&R]). The survey program is conducted under the leadership of Timothy Elig, Chief of the Human Resources Strategic Assessment Program Division.

Policy officials contributing to the development of this survey included: Susan Kelly (Plans); William Carr, LTC Harvey Johnson, USA, and Saul Pleeter (Military Personnel Policy); Steven Fischer (Readiness); Jane Burke, Kathy Flynn, and Lin Porter (Military Community and Family Policy); COL Denise Dailey, USA (Defense Advisory Committee on Women in the Services); and Robert Opsut (Health Affairs). Howard Weiss of Purdue University was also an important contributor.

DMDC's Program Evaluation Branch, under the guidance of Brian Lappin, Branch Chief, was responsible for the development of questionnaires used in the survey program. The lead developer on this survey was Rachel Lipari. She was supported in these efforts by Lindsay Rock, DMDC, and Megan Shaw and Kristin Olson, Consortium Research Fellows.

DMDC's Survey Technology Branch, under the guidance of James Caplan, Branch Chief, was responsible for monitoring survey administration and constructing the survey database. The lead analyst on this survey was Lindsay Rock, supported by Margaret Emma Holland, DMDC, and Amanda Moss, Consortium Research Fellow. Data Recognition Corporation (DRC) performed data collection and editing.

DMDC's Personnel Survey Branch, under the guidance of Richard Riemer, former Branch Chief, and Jean Fowler, current Branch Chief, is responsible for the sampling and weighting methods used in the survey program. Carla Scanlan used the DMDC Sampling Tool to plan the sample and developed the weights for this survey. Michael Paraloglou, SRA International, Inc., used DMDC's Statistical Analysis Macros to calculate the estimates presented in this tabulation volume. He was supported in these efforts by Owen Hung, SRA International, Inc. Susan Reinhold and Carole Massey, DMDC, and Deborah West, Northrup Grumman Corporation, provided programming support for the sampling and weighting tasks.

2006 SURVEY OF ACTIVE-DUTY SPOUSES: ADMINISTRATION, DATASETS, AND CODEBOOK

Introduction

The *Human Resources Strategic Assessment Program* (HRSAP), Defense Manpower Data Center (DMDC), conducts both Web-based and paper-and-pencil surveys to support the personnel information needs of the Under Secretary of Defense for Personnel and Readiness [USD(P&R)]. These surveys assess the attitudes and opinions of the entire Department of Defense (DoD) community on a wide range of personnel issues. A Web-based survey program with postal- and e-mail notification, known as the *Status of Forces Surveys* (SOFS), provides data several times per year on active-duty and Reserve component members and DoD civilian employees. Paper-and-pencil surveys with postal- and e-mail notification are used to obtain data on sensitive topics (e.g., sexual harassment) and from populations who may have limited Internet access (e.g., spouses of active and Reserve members).

The *2006 Survey of Active-Duty Spouses* (2006 ADSS) utilized both modes of administration—the Web as well as paper-and-pen—and was designed to assess the attitudes and opinions of active-duty spouses on a wide-range of quality of life issues. Data were collected by mail and Web, between November 2005 and June 2006.¹ The sample consisted of 36,054 active-duty spouses. A total of 11,138 eligible spouses returned usable surveys, which represent an adjusted weighted response rate of 32.7%.

Overview of Report

DMDC (2006a) provides details on sampling and weighting.

This report also documents the procedures used to develop the instrument, design the sample, conduct the survey, process the data and prepare analysis weights. Along with the survey instrument and communications to the sample members (A, B and C, respectively), the methods section includes details on how the survey was conducted.

Following the summary of the survey methodology is a description of the survey analysis file layout and key variables. Appendix D-M address key concepts required for the analysis of complex survey data and the structure of records in the survey analysis files are introduced in this section. The appendix in this report include:

- A and B – Web and paper survey instruments.
- C – Samples of all possible communications sent to sample members during the survey administration: letters, emails, and brochure.

¹ The initial survey field period closed February 9, 2006. There were 3,091 spouses incorrectly flagged as population ineligible during the original field period. DMDC elected to re-open the field from May 1- June 1, 2006 to give them an opportunity to participate.

- Conventions for variable naming and construction are provided in D (annotated questionnaire) and E (coding scheme),
- F, G, and H list the names and values of all variables in the basic-survey dataset and the Privacy-Act confidential variables.
 - F lists the variables in alphabetic order and flags the Privacy-Act confidential variables with an asterisk (*).
 - G lists the variables in the order that they appear in the dataset. Variables with the same function are grouped together, (i.e., all variables used for weighting are located together).
 - H provides a frequency for each variable with the SAS² values, OS flat file³ values and SAS labels in the order that the variables appear in the dataset. In addition to the variables available on the basic-survey file, H contains details for the confidential variables that had to be suppressed to preserve the privacy of survey respondents and nonrespondents.
- I provides the record layout for the basic-survey flat file.
- The SAS code used to construct the analytic variables are included in J.
- Examples of analyses are provided in K.
- L and M lists all questionnaire items and identifies where they have been used in previous DMDC surveys of active-duty members or spouses.

Method

Survey Instrument

A copy of the 2006 ADSS Web and paper questionnaires is provided in A and B. The survey was subdivided into the following seventeen topic areas:

1. Background Information—Spouse characteristics, including education, personal goals, race/ethnicity, age, U.S. citizenship, English as a second language, and personal experiences with the military.
2. Housing—Current and preferred type of housing, amount of rent/mortgage, satisfaction with aspects of residence and community, home ownership, and reasons for not owning a home.

² SAS® is a registered trademark of SAS Institute Inc., Cary, NC, USA.

³ The OS flat file is a text version of the dataset. The variables are in the columns and the records are in the rows. This data can be loaded into any statistical software package.

3. Permanent Change-of-Station (PCS) Moves—Number and characteristics of spouse moves, spouse earnings prior to most recent PCS move, employment after a PCS move, and programs or services that would have helped in obtaining employment.
4. Your Spouse's Tempo—Member's time away from permanent duty station and work/family balance.
5. Your Spouse's Deployments—Member's deployment history since September 11, 2001, and current deployment status; impact of deployment on life decisions, financial well-being, spouse and family life; number of hours spouse worked; receipt and use of extra pay; means of communicating with member; coping; member's post-deployment behavior; support services received by member; and difficulty of spouse's readjustment to member's return.
6. Effect of Deployments on Children—Emotional/behavioral impact of deployment on children and ways children cope with deployments.
7. Preparedness—Spouse's awareness of and access to important family documents during deployments, as well as financial steps taken to prepare for deployments.
8. Feelings About Military Life—Overall satisfaction with military way of life, spouse's support to stay on active duty, perceptions of family member's views on staying on active duty, member's career plans, impact of member's time away on spouse's support for member's military career, likelihood of member being deployed in the next year, and spouse commitment to the military.
9. Marital History—Military membership at time of marriage, years married, satisfaction with marital relationship, and change in frequency of problems with relationship over past year.
10. Children and Legal Dependents—Number of children and legal dependents living inside or outside the home.
11. Child Care—Use of child care, primary source of child care, satisfaction with child care, monthly cost of child care, days of work missed due to lack of child care, and the impact of child care issues on member staying on active duty.
12. Schools for Children—Number of children in school, type of schools attended, satisfaction with schools, and PCS-related school problems.
13. Employment—Awareness of the Military Spouse Career Center Web site, employment status and history, reasons for not looking for work, hours worked per week and reasons for working part-time, match between qualifications and current primary job, months worked at current job, satisfaction with employment opportunities, weeks worked during past year, shiftwork, and reasons for working.

14. Financial Well-Being—Financial goals, total household monthly earnings, spouse’s monthly earnings, greatest expenses after rent/mortgage, financial problems experienced, saving habits, and general financial condition.
15. Health and Well-Being—Perceptions of stress and social support.
16. Programs and Services—Preference for on-base versus off-base programs and services, cultural and ethnic sensitivity of military family programs, the most likely way to learn about and use support programs and services, use of Military OneSource and the primary reason for not using it, and the use of, and satisfaction with, military-provided health and dental care and benefits.
17. Communicating with You (About Survey)—Preference for Web versus paper surveys, and reasons for not completing the survey on the Web.

Sample

The target population for the 2006 ADSS consisted of spouses of active-duty Army, Navy, Marine Corps, and Air Force members, excluding National Guard and Reserve, who (1) had at least six months of service at the beginning of the survey fielding period and (2) were below flag rank. The individual must have been married to an active-duty member at the time of the survey. An active-duty member married to another active-duty member was eligible for the survey depending on the sponsor’s status, not their own. The sample consisted of 36,054 individuals; 11,138 ultimately provided usable survey responses.

Constructing the Frame and Drawing the Sample

The sampling frame was constructed from DMDC’s March, 2005 Active-Duty Master Edit File, the March 2005 Family Database, the March 2005 Active Duty Pay File, the March 2005 BAH (Basic Allowance for Housing) Population File, and the June 2005 Defense Enrollment Eligibility Reporting System (DEERS) Medical Point-in-Time Extract (PITE). It contained 740,025 records for individuals identified as eligible for the survey.

Stratification Variables

The frame was stratified (divided into mutually exclusive population groups) for sampling using the six variables listed in Table 1.

Table 1.
Member Stratification Variables

| Dimension of Stratification | Levels |
|------------------------------------|--|
| Service | Army Navy Marine Corps Air Force |
| Gender | Male Female |
| Paygrade Group | E1 to E3 E4 E5 to E6 E7 to E9 WO1 to WO5 O1 to O3 O4 to O6 |
| Race/Ethnic Category | Minority Non-minority |
| Regions | US & US territories, Other, Unknown Europe Asia & Pacific Islands All Regions |
| Family Status/Dual Service Spouse | Dual Service Spouse Other Family Status |

Researchers identified population subgroups of particular interest to policy officials. These reporting domains were defined using the demographic variables shown in Table 2. Multiple versions of most of these variables were created to permit varying levels of detail for analysis and reporting.

The sample size and allocation were determined using the DMDC Sample Planning Tool (Deever & Mason, 2002). The Tool uses a formal mathematical procedure (Chromy, 1987) to determine the minimum cost (i.e., minimum size) allocation that meets precision requirements (e.g., ± 5 percentage points) imposed on prevalence estimates for key reporting domains.

Within each stratum, the sample was selected with equal probability and without replacement. Sampling rates varied across the strata, so individuals were not selected with equal probability overall. Table 3 presents a summary of the sample allocation for the total population and by gender, paygrade group, race/ethnicity, geographic region, and family status by Service.

Sample Losses

The original sample file contained 36,054 records. Losses to the drawn sample are listed in Table 4. Sample members were lost for three main reasons: (1) self- or proxy-reported ineligibility, (2) nonlocatability, and (3) refusal to participate in the survey, or other nonresponse.

A total of 2,340 sample members were determined to be ineligible. Elimination of ineligibles decreased the sample to 94% (33,714) of its original size.

For postal mailings, the spouse's residential address was used as the primary address, followed by the member's residential address. In cases where the residential address could not be identified, however, the member's unit address was used. Less than 7% (2,503) of the drawn sample was lost because sample members could not be located. These sample members had missing, incomplete, or out-of-date addresses on file, and steps designed to obtain complete, current addresses were unsuccessful.

Losses attributable to either ineligibility or unlocatability resulted in a sample that was 87% of the drawn sample. Among these remaining individuals, the following groups were classified as nonrespondents: sample members who contacted the operations contractor (by mail, fax, e-mail, Web, or telephone) and asked to have their names removed from the survey mailing list (107), those who returned blank or incomplete surveys (858), and those who did not return a survey (19,108).

Respondents included all sample members who completed 50% of applicable questions⁴ and answered the two critical questions that determined eligibility (sample member's marital status and sponsor's military status). At the conclusion of the survey fielding, 11,138 eligible, locatable sample members had returned usable surveys.

⁴ Applicable questions are those to be completed by all respondents and excluded items that could be skipped over depending on prior answers.

Location, Response and Completion Rates

Beginning in 1995, DMDC standardized its methods for calculating response rates and completion rates using procedures patterned after those advocated by the Council of American Survey Research Organizations (CASRO). CASRO noted that varying operational definitions of response rates can lead to problems or confusion (e.g., when awarding contracts requiring pre-specified response rates or when interpreting the results of a survey). As a result, CASRO formed a task force to recommend guidelines for standardizing the operational definitions of response rates. The new DMDC procedures closely follow CASRO's Sample Type II design (see Council of American Survey Research Organizations, 1982).

Table 5 provides location, response, and completion rate information. The location rate is defined as the proportion of eligible sample members that were located. The completion rate is defined as the proportion of the located sample that returned usable surveys. The response rate is defined as the proportion of eligible sample members that returned usable surveys.

Table 5.
Location Rates, Response Rates, and Completion Rates for Eligible Sample Members

| | Observed Operational Rates | Weighted Operational Rates |
|-----------------|-----------------------------------|-----------------------------------|
| Location rate | 92.7% | 93.6% |
| Completion rate | 36.8% | 38.5% |
| Response rate | 34.2% | 36.1% |

Survey Development and Administration

The 2006 ADSS continues a line of research on active-duty spouses begun with the *1985 DoD Surveys of Officer and Enlisted Personnel and Military Spouses*. In 1992 and 1999, DMDC conducted subsequent Joint Service surveys of active-duty spouses. Many key topics covered by the 2006 ADSS were also included in its predecessors; however, questions have been updated, expanded, or streamlined in the 2006 ADSS. The survey was administered by both Web and paper-and-pencil questionnaires. Although both surveys largely covered the same content, the Question numbering differed. Both survey forms are in A.

The survey was hosted on the operations contractor's secure Web site so that sample members could complete the survey online. At the entry point to the survey, sample members were prompted for their personal ticket number to gain entry to the survey. The Privacy Notice and a page of frequently asked questions (FAQ's) were provided.

The survey allowed respondents to return to the previous page or move to the next page. In addition, buttons located below the last Question on each page allowed the respondent to clear their response(s) or save and exit the survey. Questions were answered by clicking on radio buttons, check boxes or by making a choice from a drop-down list. The respondent could change answers or could save, exit, and return at another time to change answers. The final page had

another “Save and Exit” button and a “Done” button, both with full text explanation of their functions.

For those people who had not completed the questionnaire on the Web system, we mailed the paper form to sample members along with the third reminder send on December 19th 2005 (see Table 6 for more information on the mailings).

Survey Administration

The survey administration process began in November 2005, with the mailout of notification letters to sample members (minus original ineligibles). The original field period was November 7, 2005, through February 9, 2006. Up to three additional postal communications were mailed to sample members throughout this field period. The survey field was re-opened on May 1, 2006, in order to communicate with 3,091 sample members originally misclassified as ineligible. During the May field period, a postal notification and one postal reminder were sent. The field closed on June 1, 2007.

In addition, sample members a valid with e-mail address on record could have received an e-mail notification plus up to eight e-mail reminders during the November-February field period. During the May field period, sample members with a valid e-mail address could have received an e-mail notification and up to four e-mail reminders. Postal and e-mail mailings stopped once the sample member returned a survey.

Survey Control System

The Survey Control System (SCS)⁵ was used to monitor the data collection process and to track all data transactions over the course of the survey administration. The datasets in the SCS include sample members’ names and addresses, but do not contain data obtained from the survey instruments. Because of privacy concerns, SCS datasets are not available for basic release.

The operations contractor uses the SCS to store and update project data, monitor mailings, respond to documents returned as postal non-deliverables (PNDs), and determine survey participation and eligibility status. The SCS consists of five datasets: the ORIGDAT file, the ADDRESS file, the MASTER file, the HISTORY file, and the MAILING file. Figure 1 displays the relationships among those datasets.

Figure 1.
Survey Control System

ORIGDAT file. The ORIGDAT file consists of 36,054 records, one record for each member of the sample. It is the original sampling frame file sent to the operations contractor by DMDC. The original file is loaded onto the operations contractor’s computer system and converted to a SAS dataset. As the file was converted into a SAS dataset, the SCS generated a

⁵The SCS refers to the set of data files as well as the program or operating system which maintains those files.

unique identification number (INRECNO) for each record. This number identifies the sample member throughout the SCS and also in returns data sets, comment text files and other specify text files. The names and some demographic data from the ORIGDAT file were loaded into the MASTER file in preparation for the first mailing. The addresses from the ORIGDAT file were loaded into the ADDRESS file.

ADDRESS file. The ADDRESS file tracked the postal and e-mail addresses that were maintained for each sample member. The ADDRESS file contains one record for each postal and address for each sample member (e.g., if there were five addresses located for one sample member during the survey administration, that sample member has five separate records in the ADDRESS file) yielding an ADDRESS file containing 156,745 records. Each record is uniquely identified by the combination of INRECNO (identifying the sample member) and an address number (ADDRNO) assigned to each address. This address number is the sequential order of receipt of the address for a particular sample member. For example, if a sample member has one address record in the ADDRESS file, the address number for that record is one. If the sample member faxed in a change of postal or e-mail address or a credit bureau forwarded an updated postal address for that sample member, the new address was added as address number two. The ADDRESS file was initially loaded with postal and e-mail addresses from the ORIGDAT file. Each record in the ADDRESS file includes the sample member's INRECNO, address, the source of the address, and address priority code, a variable indicating whether the record is the highest priority address for this sample member, and variables indicating whether the address successfully reached the sample member.

The priority code assigned to a given address number for a sample member was used to determine the "best" or "highest priority" address for the sample member at any given time. It was originally determined by the source of the address. Address updates obtained directly from a sample member received a priority number of one. The order of priority of address sources from "highest priority" to "lowest priority" is as follows, respectively:

1. updates directly from a sample member (call, fax, e-mail, Web update or letter)
2. address corrections from the U.S. postal service (ACS [electronic address change service], ACRs [address correction requests], and ODFs [out-of-date-forwarded mail])
3. NCOA-updated addresses
4. credit bureau-updated addresses
5. DEERS residential addresses
6. DEERS unit addresses

MASTER file. The MASTER file is used by the SCS to select records for upcoming survey mailings. This file includes a record for each member of the sample and was initially created by extracting data from each record in the ORIGDAT file. Each MASTER record includes the sample member INRECNO and the address number for the highest priority postal and e-mail address in the ADDRESS file for this sample member. The MASTER file accommodated data updates through an automated process (e.g., updating the address number in

use after the receipt of a postal or e-mail nondeliverable or Web update) or manual key entry (e.g., updating information in response to a telephone call, fax, letter return or e-mail from a sample member). As new information was received for a particular record (including changes to the highest priority address), the SCS updated the MASTER record (N=36,054) and wrote the old record to the HISTORY file. The MASTER file also contains a set of variables which summarize the sample member's mailings status.

HISTORY file. The HISTORY file is a chronicle of the changes that occurred to the MASTER file. Each HISTORY record is a subset of an outdated MASTER record with the addition of a date and time stamp as the record is updated. That is, a HISTORY record is created when there is a name, address, paygrade, or eligibility status change in the MASTER file. Thus, the HISTORY file contains as many observations as there are updates to the MASTER file.

MAILING file. The MAILING file tracked all survey mailings (postal and e-mail). This file contains one record for either an item postal mailed or e-mailed during the survey administration or for tracking postal address updates from credit bureaus (N=150,342). Each MAILING record includes the INRECNO, address number used, date of mailing, mailing status, type of mailing, and the mailing identification code (MIC).

Address Update Procedures

Initial Address Updates

Prior to the first mailing, the operations contractor ensured all domestic residential addresses were formatted to conform to U.S. Postal Service standards. Once the addresses were standardized, they were sent to an outside vendor where they were checked against the National Change of Address (NCOA) database. The NCOA software updated the address records (in standardized format) based on change-of-address cards filed with the U.S. Postal Service. The updated NCOA address file was returned to the operations contractor and integrated into the SCS. The NCOA-updated addresses were added to the ADDRESS file and became the current ADDRNO with the "highest priority code assigned" in the MASTER file.

After the NCOA-updated data was added to the SCS, another file was compiled of sample members who had an incomplete address or an address identified by NCOA as an undocumented move (i.e., the sample member had moved, but NCOA did not have a new address). The operations contractor sent copies of this file to three credit bureaus (Experian, Trans Union and CSC Credit Services)⁶ to determine whether a complete, up-to-date address for these sample members could be found. The results were integrated into the SCS, updating records in the ADDRESS file.

Ongoing Address Updates

Address update procedures also occurred when (a) additional address records were received after NCOA processing, (b) a survey document was returned as undeliverable, (c) a

sample member self-reported a name, rank, or address change, or (d) the U.S. Postal Service forwarded address correction information. Figure 2 outlines these procedures.

Figure 2.
Address Updating Procedures

As a new address was entered into the ADDRESS file, its source (NCOA, credit bureau, postal Address Correction Requested card, telephone call, fax, letter, Web, or e-mail) was recorded and a new address number was assigned. The priority assigned to the address was based upon the source of the update and the date and time of the address (see the description of priority, for the ADDRESS file). At any given time, the current address used corresponded to the address number with the highest priority code.

If all known addresses for a sample member were returned Postal Non-Deliverable Mail (PND), the sample member's record in the MASTER file was flagged "no address available." All "no address available" records were forwarded to the three credit bureaus. The credit bureaus returned files containing addresses for each submitted record, with the date on which the credit bureau received the address. If more than one address for a sample member was received from credit bureaus, the address number corresponding to the address with the most recent receipt date received the highest priority code. If one or more of the credit bureaus returned a previously unattempted address, the MASTER and ADDRESS files were updated and a re-mail was sent to the sample member. If none of the vendors had an updated address for the sample member, the operations contractor designated the sample member "nonlocatable" and stopped further mailings.

Processing of Updates

Updates from Sample Members

Sample members could provide an updated address in a variety of ways. Updates from sample members could be communicated via the toll-free telephone number (either by speaking to the operations contractor's Call Center staff or by leaving a voice mail message). In addition, sample members could mail, fax, e-mail or the survey Web site all updated information was entered into the SCC. Updates made on the Web site were loaded directly into the SCS before the start of the survey; once the survey fielding period started, the Web update page was no longer available. Other updates were entered into the SCS by the operations contractor's Call Center staff by the close of business on the day following receipt of the update.

Updates from the U.S. Postal Service

There are several types of address updates provided by the postal service. They are detailed below; each includes a description of the processing steps.

1. Postal Non-Deliverable Mail (PND): The sample member moved and no forwarding address was available. The mail piece was returned to the operations contractor. The operations contractor removed the letter from the envelope and scanned it to capture the Mailing Identification Code (MIC) in the lower right corner. A file of the MICs was loaded to the SCS so the records could be updated as PND. This was done as necessary to coincide with the mailing/re-mailing schedule. If sample member had another address on file (e.g., the unit address), that address was used for the next mailing for the next mailing. If no alternate address was on file, the Social Security Number was sent to the credit bureaus in search of a new address.
2. Address Change Service (ACS; electronic): About six weeks prior to the first mailing, the operations contractor applied to the postal service for the ACS. The postal service assigned a participant code, which was placed in the address block of the letter. The operations contractor requested semi-weekly files, which the postal service provided on diskette via Express Mail. The operations contractor loaded the files upon receipt or before another mailing was prepared.

3. Address Correction Requests (ACR; hard-copy): The outbound envelopes contained the endorsement "Address Service Requested." The post office provided the corrections via hard copy cards that were sent to the operations contractor. The corrections were entered into the SCS by the operations contractor's Call Center staff, typically by close of business the next day but no later than prior to the preparation of the next mailing.

Survey Materials and Their Distribution

Each eligible sample member received at most four original mailings: a notification letter and brochure explaining the survey program, a reminder letter, a reminder letter with a paper survey and a third reminder letter. The notification and reminder letter mailings contained a letter, except for the second reminder which contained a letter, paper survey and business reply envelope. All letters included information about using the Web as an option to complete the survey.

In addition, e-mail was used to communicate with sample members. Not every sample member had an e-mail address. However, those sample members for whom we had an e-mail address received an e-mail announcement and up to eight e-mail reminders. Samples of the letters and e-mail communications are provided in C.

General Mailing Procedures

Prior to every mailing, the SCS searched the records in the MASTER file to identify which records should be excluded (e.g., sample members self-reported as ineligible for survey participation, sample members who had already returned survey forms, and members with no valid addresses available). For re-mails (sent between mailings), the SCS identified only those records that had been updated since the prior mailing. More specifically, the SCS identified records that had resulted in PNDs or had been manually flagged for re-mailing (e.g., in response to a sample member calling the operations contractor stating she or he had received a reminder/thank you letter but had not received a survey, etc.).

Once all records for a particular mailing or re-mailing were identified, the SCS processed the records based on whether the mailing would include a brochure and/or a survey form. If the mailing group was large enough to lead to a cost savings from sorting, the records were run through Group 1 postal software to sort the records according to first-class presort postal regulations. After this procedure, a unique Mail Identification Code (MIC) was assigned to each record. The MIC was assigned either from the survey litho code list if a survey form was sent or independently if only a letter was sent.

Ticket Numbers for Web Survey Access

Prior to the first mailing, a list of ticket numbers⁷ for Web survey access was randomly generated. One secure ticket number was assigned to each sample member and remained linked to that member for the duration of the project. That is, while a member's MIC or lithocode changed with each mailing as described previously, the member's ticket number did not change.

⁷ Ticket numbers are eight alpha numeric characters generated at random.

The member's unique ticket number was printed (along with the survey URL) in each letter and e-mail sent to that individual. A member could not access the Web survey without using his or her ticket number.

Description of Letters

Letters were printed with the record's unique MIC listed in the address field and on the lower right corner of the letter. If the mailing included only letters (no brochures or survey forms), the letters were folded and machine inserted into window envelopes and sent by first class mail. Mailings that included a brochure or a survey followed the same procedure through the letter printing process. The MIC on the cover letter was used to pair the letter with the correct enclosure. During the matching process, ten percent of the mailing was visually checked, comparing numbers printed on the letter with the brochure or survey number for quality control. Any mismatched pairs initiated further investigation of the matching process. This procedure ensured that each brochure or survey was sent to the person designated to receive it. Depending on the sample size, the letters and matched enclosures were machine or hand inserted into envelopes, metered if necessary, and sent by first class mail.

The status of each mailing was tracked throughout the data collection so that address-correction information could be incorporated into all relevant mailings. When a mail piece came back PND, the next mail piece was sent to a new address (if one could be obtained during the mailing period). For all mail pieces that came back PND, re-mails were completed if a newer/updated address could be found.

DMDC provided the operations contractor with the text, letterhead and signature for the cover letters. The letters explained why the survey was being conducted, how the survey information would be used, and why participation was important. See C for copies of the letters. The letters were approved and printed on letterhead from the office of the Under Secretary of Defense and signed by the Under Secretary of Defense (Personnel and Readiness), David S.C. Chu. The letterhead and signature were printed in blue, and the text and recipient information of all letters were printed in black. In addition to including a name and address (which was also used as the mailing information for the window envelopes), each letter included a personalized salutation. The salutation addressed each sample member by his/her gender. For example, a letter to an Active Duty spouse would have included the salutation, "Dear Mrs. Smith."

Mailouts

Table 6 lists the mailing dates and return results for each of the mailouts and re-mailings. For the main notification mailing, sample members were sent a letter and brochure notified sample members that they were selected for this survey and encouraged their participation. The notification letter was mailed to 31,565 sample members on November 7, 2005.

The first reminder letter was sent to 30,326 sample members on December 1, 2005. The letter, thanked sample members for completing the survey if they had done so, and reminded them to complete the survey if they had not. The second reminder letter was sent to 27,871 sample members on December 14, 2005. The letter again thanked sample members for

completing the survey if they had done so, and reminded them to complete the survey if they had not.

The third reminder mailing provided sample members the option to complete a paper survey. For this mailing, a letter, paper survey and a folded business reply envelope were provided. The survey packet was mailed to 26,669 sample members on January 5, 2006.

The fourth postal reminder letter was sent to 22,949 sample members on January 31, 2006. The letter thanked sample members for completing the survey if they had done so, and reminded them to complete the survey if they had not.

The field was re-opened on May 1, 2006, as stated earlier. The second notification packet was sent to sample members initially flagged as ineligible and offered sample members the option to complete the survey on paper or on a secure Web site. For this mailing, a letter, paper survey, brochure and business reply envelope were provided. This packet was mailed to 3,091 sample members on May 1, 2006.

A reminder letter was sent to 3,028 sample members on May 15, 2006. The letter thanked sample members for completing the survey if they had done so, and reminded them to complete the survey if they had not.

E-mail was used to communicate with sample members. E-mail addresses were purchased from an outside vendor. The outside vendor maintains a customer database of e-mail addresses that has been lawfully collected and compiled from consumers pursuant to a notice that advised them that their personal data was being collected. Table 7 below shows the percent of sample members by Service for whom at least one valid e-mail.

Table 7.

| No valid address available | 7,827 | 8,050 | 8,300 | 6,874 | 31,051 |

Sample members with e-mail addresses received at most an e-mail notification and eight reminders. Table 8 lists the e-mail dates and e-mail addresses bounced. E-mail addresses “bounced” identifies the address was invalid at the time DMDC attempted contact. This is analogous to a postal PND. E-mail address “sent” is not the same as e-mail received. It is analogous to the non-PND return experienced during a mailed survey. It is not known if the mail was delivered to the intended individual, only that it was not returned.

Processing Returned Surveys

Once a respondent completes the survey, data are stored in an indexed file on the Web (data) server. Web and paper survey returns are merged into one dataset. Paper survey returns require additional work to input the data (explained below). Prior to providing each dataset to DMDC, the operations contractor copied the indexed file to their internal network using FTP protocol. The data are then converted to a sequential format, and the validate program reads and loads the data to the dataset.

All paper returned surveys were logged in and opened by the operations contractor upon receipt. If the envelope contained the survey booklet and other materials (e.g., extra comments, photographs, non-relevant items), the operations contractor separated it from the survey. Bundles of this type of correspondence (white mail) were sent to DMDC by regular surface mail or FedEx ground after all surveys were received. If the white mail appeared to be urgent, the operations contractor contacted DMDC to determine how it should be handled.

Survey booklets were batched for image scanning and assigned a batch number. The booklets were separated by pages, stacked in page/booklet, and forwarded for scanning. As the surveys were scanned, the batch number and a serial number (unique to each survey) were printed on each page of the survey.

The surveys were machine-edited for light marks, multiple marks, and alignment. Damaged forms were repaired, if possible, and scanned with non-damaged forms. If it was not possible to scan the documents, they were batched separately and key-entered.

Regardless of the mode of survey submission, the operations contractor processed all survey information according to DMDC approved administration plans and coding schemes.

DMDC Coding Scheme

To convert the raw data into the item scores that appear in the data files (basic-release and confidential files), DMDC provided the operations contractor with an annotated copy of the survey form (see D) and the coding notes (see E). Every attempt is made to capture all information from completed surveys and preserve the data so that secondary analysts can later create variables that were not anticipated by DMDC researchers. To accomplish these goals, DMDC subscribes to a variety of coding conventions (D).

DMDC uses “forward” coding when coding inconsistent answers in items with skip patterns. Data on the starting Question accepted as marked and data for the items within the skip pattern are edited to be consistent with the starting question. However, an unedited version of each item is preserved in a confidential dataset.

For Web respondent, the coding scheme is used to “smart skip” respondent. This does not allow respondents to view questions that they have indicated with previous answers do not apply to them. For example, if a respondent indicated on Question 21 (SA021= 2 or 3) that they do not want to own a home or that they already own a home then they did not see Question 22, which asks “What prevents you from owning a home?” Only those with the affirmative answer; yes, I want to own a home are shown the questions (SA021 = 1).

Coding or Keying Open-Ended Items

The Web survey contained twenty-one open-ended items. The original text responses from these items were captured verbatim into a SAS[®] data set that is linked by the unique identification to the survey data. The paper form had fewer open-ended items. The operations contractor keyed all verbatim. Text data in the SAS[®] files for open-ended items were spell-checked. Identifiers (e.g., proper names, addresses, e-mail addresses, phone numbers, locations, or social security numbers) were replaced with generic terms.

Fifty-Record Check

After receiving the 5% of returned records, the operations contractor ran a “50-record check.” This is a check to verify that the coding scheme and skip patters are working. DMDC checked the resulting data to determine if there were any unanticipated problems in the coding procedures (e.g., respondents were consistently answering in an unexpected manner). Minor corrections to these procedures were necessary as a result of this check and were reviewed by DMDC prior to production of the initial SAS[®] dataset. At the completion of the 50-record check, the operations contractor compiled the full set of returned surveys. The data were then cleaned and edited following the coding scheme.

Survey Analysis Files

This section (a) provides an overview of requirements for analysis of the data, (b) documents the structure of survey analysis files created for the 2006 ADSS survey, (c) describes the assembly of the analysis files, and (d) provides an overview of the variables in the survey analysis files.

Estimation

Analysis of this data requires use of weights to compensate for the unequal selection probabilities and to account for differential nonresponse among population subgroups. The analytic weights were poststratified to population totals so that weighted sample estimates would reflect population values.

In general, the procedures used to compute sample estimates of population parameters (including population totals, means, proportions), tests of hypotheses, regression relations, and their associated variances are derived from the probability structure that gives rise to the observations. As with other surveys involving complex probability structures, most of the parameter estimates of interest in this survey take the form of non-linear statistics. Examples include domain means and proportions where the denominator values are unknown and must be estimated from the sample data. The estimator takes the form of a ratio of random variables (i.e., the ratio of the estimated numerator and denominator totals or counts). In general, ratio estimates are not unbiased and their variances cannot be expressed in closed form. The variances are, therefore, approximated. The bias in a ratio estimate depends on the variance associated with the denominator total or count and can usually be ignored in samples having a large number of observations. As a working rule, the bias may be assumed negligible if the number of observations on which the estimate is based exceeds 30 or is otherwise large enough so that the coefficient of variation $[SE(x)/x]$ of the denominator is less than .10 (cf., Cochran, 1977, pp. 153-165).

Two common variance estimation methods for complex sample data are linearization (Taylor series approximation) and replication. Wolter (1985) provides a detailed discussion on methods used for variance estimation from sample surveys, including Taylor series approximation and replication methods.

Many of the standard statistical software packages, such as SPSS⁸ and older versions of SAS,⁹ compute variance estimates only for simple random samples. Using standard statistical programs with the appropriate eligibility indicator (ELIGFLGW) and the analytic weight (FINALWGT) to analyze this data will produce accurate point estimates, but variance estimates will not account for the complex sample design. Variables have been included in the analysis file so that Taylor series estimates can be computed for a stratified without replacement design, using either SUDAAN⁹ or the recently available SAS Survey Procedures.

⁸ SPSS® is a registered trademark of SPSS Inc., Chicago, IL, USA.

⁹ SAS added survey procedures in Version 7, expanding them in releases 8.0 and higher.

Data Structure

Care was taken in the preparation of the survey analysis files to provide basic access to data from the survey with sufficient information for accurate estimations, while meeting requirements for participant and non-participant anonymity. As described below, some detailed variables have been deleted from the basic-release files either because (a) they provide too great a chance of identifying an individual or (b) they are not needed to analyze the survey data. For the latter reason, some demographic variables are available on basic files only in a collapsed version. In addition to a basic-release file, a confidential file (containing a more complete set of variables than the basic-release file) has been prepared for internal DMDC use. Files were prepared as SAS and SPSS system files. An ASCII (Operating System or OS) flat file was prepared from the basic-release SAS system file. File names are indicated in Table 9.

Table 9.
Analysis File Names

| Type of File | File Name |
|---------------------------|------------------|
| Basic-release File – SAS | ADSS06B.7BDAT |
| Confidential File – SAS | ADSS06C.7BDAT |
| Basic-release File - SPSS | ADSS06B.POR |
| Basic-release File – OS | ADSS06B.DAT |

The structure of the confidential file is shown in Figure 3. The confidential file contains the basic-release file plus additional confidential variables. All variables in the confidential file are documented in this report. Appendix F and G list all variables with a notation to indicate which variables are confidential and show where each variable is documented. Intermediate weighting variables that appear only in the confidential file are documented by DMDC (2006a). Variables that appear in collapsed form in the basic-release part of the file and in a fuller version only in the confidential file are discussed later.

Analyses

Both the confidential file and basic-release file contain 36,054 records, one for every sampled individual, 34,372 of whom were eligible according to administrative records as of July 2005. As depicted in Figure 3, these records can be divided into 3 subgroups. The *Nonrespondents* subgroup, includes all records indicated by ELIGFLGW=3, where no usable response was received or ineligibility could not be determined (22,576).

Assignment of a record to the other two subgroups was based on whether (a) an individual returned a “completed” survey (11,138); and (b) the individual was eligible for the survey (658). Final eligibility was limited to those in both the March 2005 Active Duty Master File (ADMF) and the July 2005 DEERS Medical PIT extract who did not contact the operations contractor to indicate that they were ineligible.

The analytic dataset should consist of records for the *Known Self- or Proxy- reported Ineligibles* and *Eligible Respondents* subgroups. Both the *Eligible Respondents* (ELIGFLGW=1) and *Known Self- or Proxy-reported Ineligibles* (ELIGFLGW=2) are included because both types of records were used for poststratification to population totals; both types of records are needed to compute accurate variance estimates by Taylor series linearization. To analyze the eligible completed responses use the analytic weight, FINALWGT, subset the file to ELIGFLGW = 1,2 (i.e., records with non-zero weights), and restrict the subpopulation for analysis to ELIGFLGW=1.

The Structure of the Confidential File

| Subgroups | Basic-release File | Confidential and Detailed Methodological Variables | Eligibility Flag Value and Number of Records |

Variables in the Survey Analysis Files

Basic-survey Dataset

The variables in the basic-survey dataset fall into five categories: (1) Information gathered on the survey, (2) Variables constructed for analysis, (3) Information on operations, (4) Information from sampling and record data, and (5) Information on weighting. Variables are grouped in these categories in G and H.

Information gathered on the survey. These variables came directly from the survey or were constructed using only information from the survey. There is at least one variable for every item in the survey except for a few items that had to be removed to preserve confidentiality. The annotated questionnaire (see Appendix D) contains the item names, the values used to code the pre-specified alternatives, and references to applicable coding notes in E.

DMDC uses a standard naming convention for most variables. In general, the survey-derived variables can be classified as variables that begin with either “SA,” “SR,” or “X.” The

naming of “SA” variables is reviewed using the example variable, “SA052A.” For the *2006 Survey of Active-Duty Spouses*, variables names begin with “SA” to denote the population (active-duty spouse) and the survey administration year. The following three numbers correspond to the questionnaire item number. For example, the third through fifth digits indicate the main Question number (052), the sixth digit typically indicates the sub-Question item, such as (in this example) item A from a list of items in Question 52.

The “SR” variables are a set of primarily demographic items that are identically named across all DMDC surveys. The “SR” serves as a mnemonic for self-report with the remainder of the name indicating the data being collected. For example, “SRRACE” is the variable name for the item that asks sample members what race they consider themselves to be. Although all survey data are self-reported, the “SR” is used to distinguish survey-reported information from DMDC-provided information (e.g., the variable “SRRACE” from the survey is differentiated from the variable “RACE” from DMDC databases). When possible, “X” is reserved to create special crossing (marginal) variables for key analyses. “X” variables typically involve imputation for missing data and, like “SR” variables, are intended to be consistent across DMDC surveys. For more information on variable naming conventions, see Appendix E.

Variables constructed for analysis. An “R” as the last letter of a variable listed in Appendix F, G, and H is an indication that the variables may have been recoded to create special analysis. Only one version of each variable is available in basic-dataset. For example, certain demographic variables, including some information collected on the survey, had to be censored to preserve the anonymity promised to survey respondents and nonrespondents. For example, SA006AR is a recoding of SA006A.

Certain key demographic variables were constructed for DMDC analyses. These analytic variables, starting with “X,” are based primarily on self-reported information from the survey. Typically, where the self-reported information was missing on important demographics (e.g., Service, paygrade, location, or respondent gender) data were imputed from members’ or spouses’ administrative record.

The race and ethnicity questions were combined to be reported in accordance with the Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (1997). Also, items were combined to derive employment indicators based on U.S. Census Bureau’s Decennial Census and Current Population Survey (2002).

J documents many of the decisions made in the analyses reported by DMDC (2006b). For a large number of survey items, analysts must make decisions on the treatment of special codes (such as Not Applicable.).

Information on operations. The DMDC-provided identification number, ADSS2005, is unique and is used to identify responses as they are processed. Other variables are created by the operations contractor but are too detailed to be in the basic-release file.

Information from sampling and record data. Most of the variables used in sample design and selection are too detailed to be in the basic-release file (see the later section on confidential variables).

Information on weighting. Derivation of weights is discussed in detail in DMDC (2006a). See Appendix K for examples of analyses using these variables:¹⁰

Full Survey Dataset

In addition to variables on the basic-survey dataset, the full survey dataset also has five additional categories of variables: (1) the raw version of survey items that appear in a collapsed form in the basic-release section, (2) the raw version of key demographic variables used in analyses that appear in a collapsed form in the basic-release section; (3) detailed variables created by the operations contractor to document operations, (4) detailed variables used in sampling, and (5) detailed variables used in weighting. Variables are grouped in these categories in Appendix F, G and H.

Privacy Act confidential variables—survey data. This section of the full survey dataset contains the original survey variables that had a recoded version in the basic-survey dataset. To the extent possible, recoded versions of these variables are in the basic-release file section under variables constructed for analysis.

Privacy Act confidential variables—analysis data. This section of the full survey dataset contains the analytic variables constructed by DMDC. To the extent possible, recoded versions of these variables are in the basic-survey dataset section under variables constructed for analysis.

Privacy Act confidential variables—operations data. This section of the full survey dataset contains operational variables created by the operations contractor. These variables are useful for methodological studies and/or were used in determining eligibility and response status.

The identifying variables describe how the record was processed once a survey was returned. The variables BATCH, SERIAL, and LITHO uniquely identify each returned survey. LITHO is the lithocode scanned from the survey. BATCH and SERIAL are the codes printed on

¹⁰ Two additional variables required for SUDAAN are on the dataset: NPSTRAT, poststratification population counts; and, PSTRATA, poststratification strata.

the survey during scanning to identify the scan batch number and scan order of each survey. These numbers can be used to retrieve the paper copy of a survey for a short time after it has been scanned (e.g., should researchers want to check electronically-stored information against the respondent's answer on the paper survey). DUPRET and DUPRET2 indicate the receipt of multiple returns. DUPRET2 includes blank returns in the multiple counts; DUPRET excludes these returns.

The classification variables describe how individual sample member's records were grouped and indexed. FALG_FIN indicates the final disposition status of a sample member (i.e., survey returned, blank survey returned, not locatable, or no return). Several other classification variables were used to categorize a survey's final disposition. These variables are: BLKREAS, SCSINEL, and REFUSE. BLKREAS codes the reason given by the sample member for returning a blank survey, SCSINEL indicates the reason given by the sample member for being ineligible, and REFUSE indicates whether a sample member refused to complete a survey.

Privacy Act confidential variables—sampling and record data. This section of the full survey dataset contains administrative file variables and constructed variables used in determining the sampling design. It also includes the sampling strata identifiers and counts.

Confidential variables—weighting. This section of the full survey dataset contains variables used in analysis of non-response and in the construction of the weights.

Using Appendix H

Regardless of whether analysts use all or only portions of the database, all analysts should replicate the results found in the tables in H. It is only by replicating these results that analysts can be sure that they are reading the data correctly. An annotated example of an H table is listed in Figure 4. (However, table does not reflect actual results.)

- Codebook title and item text.** The codebook title is the same for every table in Appendix H of this codebook. It lists survey name. If applicable, the indented text under the title presents the verbatim Question or instructions that accompany a specific item in the survey.
- Variable name.** The variable name for a survey item is up to eight characters in length and corresponds to the variable name that is used in the SAS[®]-based, basic-release data file. The conventions for naming survey-derived variables are documented in Appendix E. Appendix F and G contains a full listing of the basic-release file variables, as well as short descriptions of what the variables document.
- Survey item text.** For survey items, this text is the verbatim item wording. For other variables, this text provides a verbal description of the variable.
- Location of the item on the OS data file.** This block provides the location of the variable on the OS data file. The OS data block documents (a) the starting and ending column numbers where the data are stored and (b) the number of columns that the data occupy.

5. **SAS data file information.** This block indicates format name, variable type (character or number), length and informat of the data in the SAS[®] data file. The last block indicates the informat appropriate for reading the data from the OS data file.
6. **Counts of item value responses.** This column indicates the number of sample members who fall into the category corresponding to each value for the variable. The count provided for each variable value should correspond exactly to those that analysts would obtain when running unweighted frequencies on all 36054 records in the accompanying database. Before running complex statistical analyses, analysts are encouraged to re-create these frequency tables. Re-creating the counts minimally ensures that the data are being correctly read by the analysts' computers and programs.
7. **Respondent percentages for each value.** This column indicates the percentage of sample members who marked each variable value. The percentages are calculated by dividing the row value in the "FREQ" column by the total listed at the bottom of the "FREQ" column. The percentages provided for each variable value should correspond exactly to those that analysts would obtain when running unweighted frequencies on all 36054 records in the accompanying database.
8. **Response OS values.** This column presents the OS (ASCII) code for the actual or re-coded response values for each survey item. Further details on the values in this column are found in either the annotated survey form or in E. For example, all negative values are found in Appendix E.
9. **Response SAS[®] values.** This column presents the SAS[®] code for the response values for each variable. Further details on the values in this column are found in either the annotated survey form or in Appendix E. An explanation of negative values is presented in Appendix E.
10. **Explanation of the item value codes.** This column presents brief verbal explanations of the OS and SAS[®] coding for each survey item. If the coded information corresponds to survey response alternatives, the text in the table is the verbatim response from the survey instrument. More detailed explanations are presented in the annotated survey form (Appendix D) and in Appendix E.
11. **Total of response frequencies and percents.** The number appearing at the bottom of the "FREQ" column is the total number of sample members in the basic-release file. This number is the same for every table in this codebook. That is, every sample member in the database is accounted for on every variable even if the variable indicates only that the information was missing for that sample member. The number appearing at the bottom of the "PERCENT" column is typically 100.0. Rounding error, however, occasionally causes the total percentage to be slightly above or below 100.0.
12. **Messages to analysts.** The messages alert analysts to situations specific to a variable including (a) rounding errors resulting in a total percentage other than 100 percent; (b) the variable having values that are "too numerous to list;" (c) extraction of the

variable from another specified database; (d) creation of the variable from two or more variables specified in the message; and (e) further clarification of the survey item corresponding to the variable.

13. **Codebook page number.** This is the H page number corresponding to a specific variable. F and G identifies the page number in H where the variable can be found.

PRIVACY ACT STATEMENT & INFORMED CONSENT INFORMATION

In accordance with the Privacy Act, this notice informs you of the purpose of the survey and how the findings will be used. It also provides information about the Privacy Act and about informed consent. Please read it carefully.

AUTHORITY: 10 United States Code, Sections 136, 1782, and 2358.

PRINCIPAL PURPOSE: Information collected in this survey will be used to research attitudes and perceptions of military life. This information will assist in the formulation and improvement of policies and programs that benefit military families. Reports will be provided to the Office of the Secretary of Defense, each Military Department, and the Joint Chiefs of Staff. Findings will be used in reports and testimony provided to Congress. Some findings may be published by the Defense Manpower Data Center (DMDC) or in professional journals, or presented at conferences, symposia, and scientific meetings. In no case will the data be reported or used for identifiable individuals.

ROUTINE USES: None.

DISCLOSURE: Providing information on this survey is voluntary. Most people take 30 minutes to complete the survey. There is no penalty or loss of benefits to which you are entitled if you choose not to respond. However, maximum participation is encouraged so that data will be complete and representative. Your survey responses will be treated as confidential. Identifying information will be used only by government and contractor staff engaged in, and for purposes of, the survey research. For example, the research oversight office of the Office of the Under Secretary of Defense (Personnel and Readiness) and representatives of the U.S. Army Medical Research and Materiel Command are eligible to review research records as a part of their responsibility to protect human subjects in research. This survey is being conducted for research purposes. If you answer any items and indicate distress or being upset, etc., you will not be contacted for follow-up purposes.

SURVEY ELIGIBILITY AND POTENTIAL BENEFITS: DMDC uses well-established, scientific procedures to select a sample that represents the Defense community. This sampling procedure sets up clusters of people based on combinations of demographic characteristics (e.g., location, gender). You were selected at random from one of these clusters of people. This is your chance to be heard on issues that directly affect you. While there is no benefit just for you for your individual participation, your answers on a survey make a difference. For example, results from previous surveys have played an important role in deliberations on pay rate adjustments, cost of living and housing allowances, and morale and retention programs.

STATEMENT OF RISK: The data collection procedures are not expected to involve any risk or discomfort to you. The only risk to you is accidental or unintentional disclosure of the data you provide. However, the government and its contractors have a number of policies and procedures to ensure that survey data are safe and protected. For example, no identifying information (name, address, Social Security Number) is ever stored in the same file as answers to survey

questions. Answers to survey questions may be shared with organizations doing research on military spouses but only after minimizing detailed demographic data (for example, paygrade and detailed location information) that could possibly be used to identify an individual. A confidentiality analysis is performed to reduce the risk of there being a combination of demographic variables that can single out an individual. To further minimize this risk, some variables are randomly set to missing. Government and contractor staff members have been trained to protect client identity and are subject to civil penalties for violating your confidentiality.

If you experience any problem with the survey, please e-mail ADSSurvey@osd.pentagon.mil or leave a message any time, toll-free, at 1-800-881-5307. If you have concerns about your rights as a research participant, please contact Ms. Caroline Miner, Human Subjects Protections Specialist, Deployment Health Support Division, 5113 Leesburg Pike, Skyline 4, Suite 403, Falls Church, VA 22041, humansubjects@deploymenthealth.osd.mil, (703) 575-2677, Fax (703) 824-4216.

Returning this survey indicates your agreement to participate in this research.

BACKGROUND INFORMATION

1. What is your marital status?

- Married
- Separated
- Divorced ⇒ Please return your survey in the envelope provided.
- Widowed ⇒ Please return your survey in the envelope provided.

2. Is your spouse currently serving on active duty (not as a member of the National Guard or Reserve)?

- Yes
- No ⇒ Please return your survey in the envelope provided.

3. What is the highest degree or level of school that you have completed? *Mark the one answer that describes the highest grade or degree that you have completed.*

- 12 years or less of school (no diploma)
- High school graduate---high school diploma or equivalent (e.g., GED)
- Some college credit, but less than 1 year
- 1 or more years of college, no degree
- Associate's degree (e.g., AA, AS)
- Bachelor's degree (e.g., BA, AB, BS)
- Master's, doctoral, or professional school degree (e.g., MA, MS, MEng, MBA, MSW, PhD, MD, JD, DVM)

4. Are you currently enrolled in school? *Mark one.*

- Yes ⇒ GO TO QUESTION 6
- No, and I do not want to be in school ⇒ GO TO QUESTION 6
- No, but I would like to be in school

5. What prevents you from attending school? Mark "Yes" or "No" for each item.

| | Yes | No |
|--|--------------------------|--------------------------|
| a. Hours/location are not convenient | <input type="checkbox"/> | <input type="checkbox"/> |
| b. I move too often | <input type="checkbox"/> | <input type="checkbox"/> |
| c. Transportation problems | <input type="checkbox"/> | <input type="checkbox"/> |
| d. Family responsibilities | <input type="checkbox"/> | <input type="checkbox"/> |
| e. Conflicts with work schedule | <input type="checkbox"/> | <input type="checkbox"/> |
| f. Costs of education | <input type="checkbox"/> | <input type="checkbox"/> |
| g. Other | <input type="checkbox"/> | <input type="checkbox"/> |

6. Please indicate whether the following are goals for you. Mark one answer in each row.

| | Yes, this is a goal I am currently working on | Yes, this is a goal I plan to pursue | No, this is not a goal for me | Not applicable |
|--|---|--------------------------------------|-------------------------------|--------------------------|
| a. Furthering my education/training | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| b. Having a child/more children | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| c. Raising healthy, happy, well-rounded child(ren) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| d. Getting a better job | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

| i. Other | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

7. Are you Spanish/Hispanic/Latino?

- No, not Spanish/Hispanic/Latino
- Yes, Mexican, Mexican-American, Chicano, Puerto Rican, Cuban, or other Spanish/Hispanic/Latino

8. What is your race? Mark one or more races to indicate what you consider yourself to be.

- White
- Black or African American
- American Indian or Alaska Native
- Asian (e.g., Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese)
- Native Hawaiian or other Pacific Islander (e.g., Samoan, Guamanian or Chamorro)

9. What age were you on your last birthday?

Years

10. Are you a citizen of the United States? Mark one.

- Yes, born in the United States
- Yes, born in Puerto Rico, Guam, the U.S. Virgin Islands, or Northern Marianas
- Yes, born abroad of American parent or parents
- Yes, a U.S. citizen by naturalization
- No, not a citizen of the United States

11. Is English a second language for you?

- Yes
- No

12. Have you ever served in a regular active-duty Service or in the National Guard/Reserve?

- Yes
- No

13. Were your parent(s)/guardian(s) in a regular active-duty Service and/or National Guard/Reserve? Mark one.

- Yes, while I was growing up
- Yes, but only before I was born
- No

14. What other types of experiences have you had with the military? Mark "Yes" or "No" for each item.

| | Yes | No |
|---|--------------------------|--------------------------|
| a. My brother(s) and/or sister(s) serves/served in the military | <input type="checkbox"/> | <input type="checkbox"/> |
| b. My or my spouse's child(ren) serves/served in the military | <input type="checkbox"/> | <input type="checkbox"/> |
| c. My close, personal friend serves/served in the military | <input type="checkbox"/> | <input type="checkbox"/> |
| d. You worked/are working as a civilian for the Defense Department or military Services | <input type="checkbox"/> | <input type="checkbox"/> |

HOUSING

15. Did you and your spouse have a choice in where to live at your current location?

- Yes
- No

16. Which of the following best describes where you live?

- Military housing, on base
- Military housing, off base
- Civilian housing that I rent
- Civilian housing that I own

17. What is the total amount you and your spouse paid last MONTH for rent or mortgage?

Does not apply

\$, .00

◆ 18. How satisfied are you with the following characteristics of your current residence and community? *Mark one answer in each row.*

| | Very dissatisfied | Dissatisfied | Neither satisfied nor dissatisfied | Satisfied | Very satisfied |

19. Suppose that the quality of on-base housing was the same as the type of off-base housing you could afford with your family's housing allowance. Which would you have preferred?

- Military housing, on base
- Military housing, off base
- Civilian housing

20. Do you want to own a home?

- Yes ⇒ GO TO QUESTION 21
- No ⇒ GO TO QUESTION 22
- Does not apply; I own a home ⇒ GO TO QUESTION 22

21. What prevents you from owning a home? *Mark "Yes" or "No" for each item.*

Dear Mrs. Sample:

Recently, you were asked to participate in the *2006 Survey of Active-Duty Spouses*. If you have already completed the survey, I want to thank you for taking the time to help us understand the way things are for military families today.

If you have not had a chance to complete the survey or were thinking about not participating, please reconsider. Your participation is crucial and I appreciate your taking the time to complete the survey — this really is your chance to express your views on programs that affect active-duty families.

If you have not done so already, please take the survey by logging onto the following Web site: <https://dodsurvey.osd.mil/> At the Web site, you will need to enter your **Ticket Number: YXXXXXXX**

If you cannot take the survey now, please take it soon. The survey should take only 30 minutes to complete. You can use any computer with Internet access to complete the survey. If you have any questions, please email ADSSurvey@osd.pentagon.mil or leave a message anytime, toll-free, at 1-800-881-5307.

Your time and cooperation in this very important effort are greatly appreciated.

Sincerely,

David S. C. Chu

Dear Mrs. Sample:

Recently, you were asked to complete the *2006 Survey of Active-Duty Spouses* on the Web. If you have already completed the survey, I want to thank you for taking the time to do so. If you have not yet completed the survey on the Web, you may still use the Internet to complete this survey. To do so, go to <https://dodsurvey.osd.mil/>. To access the survey, you will need to enter your **Ticket Number: YXXXXXXX**

Should you prefer, you may also fill out a paper version of the survey. Completing the enclosed survey should only take about 30 minutes of your time.

Whether you answer the paper or Web version of the survey, I assure you your responses will be kept confidential. Only group statistics will be reported. To conduct the survey, administrators must know your identity in order to provide you with the survey materials; however, this information will be used only in administering the survey. No information about an individual will be released.

If you choose to complete the paper survey, please return it at your earliest convenience in the enclosed, postage-paid envelope. If you have any questions pertaining to the survey, please call our Survey Processing Center at (toll free) 1-800-881-5307, email ADSSurvey@osd.pentagon.mil, or send a facsimile to 1-763-268-3011.

Thank you for your time and cooperation in completing this survey.

Sincerely,

David S. C. Chu

Dear Mrs. Sample:

Recently, you were asked to participate in the *2006 Survey of Active-Duty Spouses*. At the time this letter was prepared, your completed questionnaire had not been received. Because your views and opinions are important, I urge you to take this final opportunity to complete the survey.

The survey findings will be reviewed by senior Defense officials and used to help improve family policies and programs. We have sent the survey to a scientifically selected sample of people so the survey findings will accurately represent the opinions and attitudes of all military spouses. However, the success of this method is dependent on you, and others like you, who are willing to complete the questionnaire.

If you have already completed the survey, thank you for your time and cooperation. If you have not already done so, please take time to complete the questionnaire previously mailed to you and return it in the postage-paid envelope or complete the survey via the Web. To access the Web version of the survey, go to <https://dodsurvey.osd.mil/>. Once at the Web site, enter your **Ticket Number: YXXXXXXX**

It is not necessary to complete the survey in one sitting. The Web site has been set up to allow you to start and stop as necessary. If you cannot access the Internet or if you have any questions pertaining to the survey, please call our Survey Processing Center at 1-800-881-5307, email ADSSurvey@osd.pentagon.mil, or send a fax to 1-763-268-3011. For your views to be included in the survey results, your survey must be received within the next week.

Thank you for your time and assistance in this very important effort.

Sincerely,

David S. C. Chu

Dear Mrs. Sample:

The military places a lot of demands on you as a spouse. With increased deployments, the demands have gotten even tougher. We want to hear how you are making it work (and where you could use some help). We are asking you to share your experiences.

We know your life is very busy, but please take the time to complete the *2006 Survey of Active-Duty Spouses*. This survey is your chance to have your experiences included in creating policies and programs for the entire military community. This survey was last done six years ago, so we need fresh voices as times have dramatically changed. I assure you that your responses will be kept confidential. No information about you as an individual will be released.

You can fill out the enclosed paper survey and return it in the return envelope provided. Or you can complete the survey on any computer with Internet access, at home or elsewhere. To complete the survey on the Web:

- Go to our Web site: <https://dodsurvey.osd.mil>
- At the Web site, you will be asked to enter your **Ticket Number**.
- Your ticket number is **YXXXXXXX**

Please take the time today to complete the survey. It should only take about 30 minutes of your time. Please provide frank responses to the survey questions. I assure you that your responses will be kept confidential. Only group statistics will be reported. To conduct the survey, administrators must know your identity in order to provide you with the survey materials; however, this information will be used only in administering the survey. No information about an individual will be released.

If you cannot access the Internet or if you have any questions pertaining to the survey, please call our Survey Processing Center at 1-800-881-5307, contact us via email at ADSSurvey@osd.pentagon.mil, or send a fax to 1-763-268-3002.

Thank you for taking the time to help us increase our understanding of military family issues. For more information on this survey program, please see the enclosed brochure.

Sincerely,

David S. C. Chu

WILL MY ANSWERS BE KEPT PRIVATE?

- Your privacy will be safeguarded in accordance with the Privacy Act of 1974 (Public Law 93-579).
- Only group statistics will be reported. Individual data will not be reported.

PRIVACY ACT STATEMENT

In accordance with the Privacy Act, this notice informs you of the purpose of these surveys and how the findings of these surveys will be used. Please read it carefully.

AUTHORITY: 10 United States Code, Sections 136, 1782, and 2358.

PRINCIPAL PURPOSE: Information collected in these surveys will be used to report attitudes and perceptions of military life. This information will assist in the formulation and improvement of policies and programs that benefit military families. Reports will be provided to the Offices of the Secretary of Defense and each Military Department, and the Joint Chiefs of Staff. Findings will be used in reports and testimony provided to Congress. Some findings may be published by the Defense Manpower Data Center (DMDC) or in professional journals, or presented at conferences, symposia, and scientific meetings. In no case will the data be reported or used for identifiable individual(s).

ROUTINE USES: None.

DISCLOSURE: Providing information on this survey is voluntary. There is no penalty if you choose not to respond. However, maximum participation is encouraged so that the data will be complete and representative. Your survey responses will be treated as confidential. Identifying information will be used only by persons engaged in, and for purposes of, the survey research.

2005 Survey of Military Spouses

2005 SURVEY OF ACTIVE-DUTY AND RESERVE COMPONENT SPOUSES

- The Department of Defense (DoD) is surveying military spouses as part of its personnel survey program that features Web-based and paper surveys sponsored by the Under Secretary of Defense for Personnel and Readiness.
- These surveys enable the DoD to quickly and accurately gauge the attitudes and opinions of the entire DoD community - active-duty and Reserve component members and spouses, and DoD civilians - on the full range of work and family issues.
- The Defense Manpower Data Center (DMDC) is tasked with administering those surveys.

HOW DO I PARTICIPATE?

- You'll need a Ticket Number each time you access the survey Web site.
- You will find a tear-out card with your Ticket Number below.
- This tear-out card was designed to fit in your wallet.

WHY SHOULD I PARTICIPATE?

- This is your chance to be heard on issues that directly affect you and your family.
- Some examples of topics include: impact of deployments on you and your spouse and children, your employment opportunities, and overall satisfaction with military life.
- Your answers on a survey *make a difference*. For example, results from previous surveys have helped the Department design better childcare programs, employment programs, and morale and retention programs.

HOW DID YOU PICK ME?

- We use well-established, scientific procedures to select a sample that represents the military community.
- You were selected at random to be part of this survey.

WHY USE THE WEB? WHAT IF I DON'T HAVE A COMPUTER OR ACCESS TO THE INTERNET?

- The Web enables us to get survey results to senior Defense officials faster.
- These surveys are *Official Business*; therefore, they can be completed using government equipment.
- If you don't have a computer or Internet at work/home, many installation and public libraries, as well as education centers, have computers with Internet access that you could use.

WILL I EVER SEE THE RESULTS OF THIS SURVEY?

- Results from this survey will be posted on the following Web site:
<http://www.dmdc.osd.mil/surveys/>

Appendix E

Coding Scheme

APPENDIX E: Coding Scheme for the 2006 Survey of Active-Duty Spouses

The guiding premise of this DMDC survey is that the analysts creating the dataset will not be the only ones analyzing the data. DMDC rarely collects data only for immediate use or to answer one question. Different people, both at DMDC and other organizations, analyze DMDC datasets over time. Every care is taken in organizing and documenting DMDC surveys so secondary analysts can be reasonably certain they understand both how data were coded and the limitations of the data. This appendix describes (1) conventions for naming variables, (2) methods for capturing data from the survey instrument, and (3) the process of editing survey response variables created for the analysis file.

Variable Naming

In responding to a customer's request for information, DMDC often uses multiple data sources. Information on a particular topic may need to be obtained from different surveys or from a survey that has been repeated over a number of years. For example, a customer might be interested in organizational commitment items included in a survey of active duty members in 1999 and in an exit survey in 2000. Conventions discussed below are being used as a means for facilitating such analyses.

Survey Variables

Standard survey response and operational variables. Variables common to DMDC surveys are assigned identical names and values across surveys. The prefix "SR" is used for self-reported demographic survey items. Common survey response variables occurring in the 2006 Survey of Active-Duty Spouses include SRED1 (educational attainment), SRRACEA-E (race/ethnicity), SRHISP1 (Hispanic ethnicity). Examples of common operational variables are COMMENTFLG (indicates whether the respondent entered a comment) and DARVDATE (date the survey was completed)

Nonstandard survey response variables. Survey item variables are named according to the following conventions (illustrated for the 2006 Survey of Active-Duty Spouses):

- The first and second positions of the variable name are "SA"
- The third, fourth, and fifth positions are the survey item numbers 001 through 149.
- Positions six and seven usually represent sub-items for multi-part survey items. The exceptions, skip pattern flags ("SK") and specify flags ("SP"), are explained later in the section Standard Flag Variables.
- The last position may be "U" (indicating that the values have not been edited to enforce skip pattern consistency) or "R" (indicating that the original values have been recoded).

Crossing (domain) variables. Survey response variables may be recoded to define crosstabulation categories for reports or analyses. In most cases, missing values are imputed from administrative records; in some cases values are masked to protect confidentiality. The first position of the variable name is “X”. See Appendix J for the SAS code that defines these variables.

Administrative Record Variables

When administrative record data are used unchanged in the analysis file, the original variable name, values, and value labels are retained. For example, SERVICE identifies the member’s service in the analysis file exactly as it does in the ADMF. Likewise, the variable name, values, and labels for RORG_CD appear in the analysis file exactly as they do in the Master File. Any change in the variable values or labels (e.g., collapsing) causes a change in the variable name.

Raw-Data Encoding Process

When a respondent completes an online survey, data are stored in an indexed file on the Web (data) server. This file is copied to the operations contractor’s internal network and the data are matched to the sample file, attaching each member’s survey responses to the sample record. Paper surveys are scanned using Intelligent Character Recognition (ICR) technology. If any documents cannot be scanned, they are batched separately and the data are key-entered. The data from the paper form are then merged with the Web data.

As a result of this merge, survey items appearing on the paper form but not on the Web form have missing values on Web respondents’ records; these missing values are assigned the SAS special value .F. For example, question 149 (“Were any of the following reasons for not completing the survey on the Web?”) appeared only on the paper 2006 Survey of Active-Duty Spouses form. Therefore, these items (variables SA149A- SA149I) were assigned the value .F on Web respondents’ records. More information on missing values is given in the section “Missing Data Codes.”

The data are then cleaned in an iterative multi-step process. First, values are assigned to valid responses (see Appendix D for the annotated form) and item nonresponse is coded (-9). Then the process creates flag variables for respondent-specified items; flags, validates, and codes skip pattern variables; codes the content of text entries.

The Web survey form’s “other specify” and open-ended comments are collected in a comment file and linked to the Web survey data by ticket number. The paper survey form “other specify” and open-ended comments are collected in a comment file and linked to the data by an identifier given to each survey as it is scanned. All text entries are cleaned and edited to remove identifying information and expletives. The long comment item at the end of the questionnaire is keyed in a separate process. The comments data are confidential and are not merged into the returns dataset.

The next sections discuss the assignment of missing value codes, the special treatment of data variables, and the editing of skip patterns in steps 3 and 4.

Value Coding and Formats

Datasets are prepared as SAS¹ system files. An OS or flat file version of the basic survey release file is then prepared from the SAS system file. This section describes how values are treated in creating the SAS system files and notes any differences in the flat file.

In the SAS system files, variables are declared as numeric unless they contain true alphabetic characters. Although numeric variables can take more storage space, many statistical and logical operations can be done only with variables that are declared as numeric. Values for alphabetic variables are input with \$CHARww. formats to preserve leading, embedded, and trailing blanks.

Missing Data Codes

The instructions used to assign missing data codes and other special codes are shown in Tables E-1 and E-2. The labels associated with each assigned value are shown in italicized text. These are the SAS format labels used in the SAS dataset.

- Table E-1 contains basic SAS and flat file missing data values.
- Table E-2 contains SAS and flat file missing data values for dates.

The values presented in Table E-1 are general missing data values that have been adopted in recent years for use on DMDC surveys. (Standards for date variables are in Table E-2.) Both tables have separate columns for values used for SAS system files and flat files. The biggest difference between the flat files and SAS system files is in the treatment of missing values. The flat file values differ from the SAS values because SAS implements special missing values and formats that may not be compatible with other statistical analysis software such as SPSS².

| SAS [®] File | | Flat File | | Description |
|-----------------------|-----------------------|-----------|---------|---|
| Re-coded value | Value read from input | YYYYMMDD | MMYYYY | |
| . | -54908 | 18090901 | SEP1809 | <i>No response (invalid skip)</i> |
| .O | -55701 | 18070701 | JUL1807 | <i>Out-of-range error</i> |
| .N | -56096 | 18060601 | JUN1806 | <i>Not applicable (valid skip)</i> |
| .I | -56887 | 18040401 | APR1804 | <i>Incomplete grid error</i> |
| .B | -58073 | 18010101 | JAN1801 | <i>Blank/no survey. Filler value for survey variables when either a blank survey is returned or no survey is returned. Control system variables retain assigned values.</i> |

Note: This conversion has already been done in DMDC SAS[®] files.

SAS can represent up to 27 missing data values for numeric variables as either a period or a period-letter combination. While SAS can read alpha characters representing missing data in a raw data field declared to be numeric, other programs such as SPSS do not accept these characters in numeric fields. Missing numeric data are represented in the flat files by negative numbers that can be declared as missing values. For example, a multiple response error in flat files is coded as a “-8”, which can be declared as a missing value when the data are input in SPSS—in the SAS file, the value “.A” is used to represent a multiple response error.

Data requirements of SUDAAN³ are also considered in coding. Primarily this means avoiding in coding the use of a zero, which has a special use for certain procedures in SUDAAN, for a variable that will be used as a categorical independent variable.

Many types of missing data are common to scanned surveys and are self explanatory. In general, missing data are coded as “-9” (SAS: .) for item nonresponse; multiple response errors are coded as “-8” (SAS: .A).⁴ Incomplete responses in grids that could not be resolved by visual inspection are coded as “-4” (SAS: .I). Out-of-Range responses in grids (e.g., number of days or weeks in a year larger than 365 or 52, respectively) are coded as “-7” (SAS: .O). For a single item that contains a response alternative of “Not applicable”, a missing data code of “-6” (SAS: .N) is typically used. When multiple items can be affected by a skip pattern or when item(s) have multiple ways to be not applicable, other specific codes are used. This type of coding is discussed later in the section entitled “Skip Pattern Coding.”

³ SUDAAN is a trademark of the Research Triangle Institute.

⁴ Multiple response errors can only occur for users of the paper form. Web instrument, through the use of radio buttons, does not allow multiple responses for one item.

Multiple survey forms or modes (e.g., paper and web) are sometimes used in a single effort, and the data from all the related forms combined into a single dataset for analysis. Questions may appear in one form or mode but not in another. In a combined dataset, a code of “-5” (SAS: .F) indicates missing data for variables not on the form completed by a respondent.

Records are included in the files for sampled members regardless of whether or not they returned a survey. If a member did not return a survey or returned a blank survey, every survey variable is assigned a value of “-1” (SAS: .B).

Standard Flag Variables

Skip pattern flags indicate whether one or more questions were or are not to be asked of respondents. For example, if respondents to this survey indicated on question 4 (SA004=3) that they are currently enrolled in school, or not enrolled and don’t want to be, then web respondents did not see question 5. SA005SK is a flag variable indicating whether Question 5 (SA005A-SA005G) was answered consistently with the skip pattern. The skip flag is then used to remove incongruent responses from the paper form. Skip flags are useful for evaluating the effectiveness of the skip pattern and for screening out ambiguous response patterns during analysis.

Specify flags are set during data editing in accordance with Table D-2. Skip flags are set in the manner discussed in Table D-3; however, the specifics for each skip flag are detailed in the next section. Note that the value -9 (SAS: .) is used to represent missing data in flag variables in a slightly different way than they are used for standard survey variables.

Special Codes for Skip Patterns

Discrepancies in skip patterns are resolved during data editing. First, skip flags are created. Table D-1 introduced the general outline of the skip flags, but the specific flags for each skip pattern are specified in Table D-3.⁵ After the creation of all the skip flags, variables within the skip patterns are forward coded to make them consistent with the variables that start the skip patterns. To preserve all data, the variables within skip patterns are first copied to a set of confidential variables. The convention for naming these “raw” variables is to end the name with “U” for Unedited. Table D-3 specifies how to assign the special values to variables within the skip patterns. While Table D-3 is organized to show all the edits for a skip pattern, all skip flags are set prior to undertaking any forward coding. The remainder of this section describes the logic behind coding of skip patterns.

While an analyst can ignore discrepancies between a respondent’s answer on an item containing a conditional direction to skip items and answers to those items, it is generally better to resolve the discrepancies. Two ways of resolving the discrepancies can be termed backward and forward coding. Backward coding involves correcting the discrepancy by editing back from the skip pattern items to make the initial question conform. Forward coding involves correcting the discrepancy by editing forward from the initial question to make the skip pattern items conform. Data for this survey are forward coded with data on the starting question accepted as marked and data for the items within the skip pattern edited to be consistent with the starting question.

⁵ Table E-3 also provides special coding notes for other non-obvious codings.

If a starting item is marked in such a way that the respondent should skip, items within the skip pattern have the not applicable value (.N) assigned regardless of what the respondent marked on the items within the skip pattern. These values differentiate items with data missing because the item should have been skipped from items where data are missing because the respondent should have answered them but did not.

4. **SRRACEA—SRRACEE, SRRETH1**

The codebook pages for SRRACEA—SRRACEE should note:

"These items are consistent with the '1997 Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity' and the 2000 Decennial Census."

SRRACEA—SRRACEE are codes as "Mark all that apply" items, where 1=Not marked and 2=Marked. SRRACEA indicates whether the "White" response category was marked, SRRACEB indicates whether the "Black or African-American" response category was marked, SRRACEC indicates whether "American Indian or Alaskan Native" was marked, SRRACED indicates whether "Asian" was marked, SRRACEE indicates whether "Native Hawaiian or other Pacific Islander" was marked, and SRRACEF indicates whether "Some other race" was marked. If none are marked, then all of SRRACEA—SRRACEE are assigned -9 (missing).

SRRETH1 implements the October 1997 standards for reporting Federal data on race and ethnicity. The codebook page for SRRETH1 should note:

"These racial/ethnic categories are consistent with the 1997 standards for maintaining, collecting, and presenting federal data on race and ethnicity."

SRRETH1 groups responses to SRRACEA-SRRACEF into racial/ethnic categories including multi-racial combinations. The categories are broken down by whether the respondent indicates Hispanic descent (from variable SRHISPA1). Each description in the "RACIAL CATEGORY" column of the chart is preceded by an H for "Hispanic" if the respondent has a value of 2 for SRHISPA1, and by a NH for "Non-Hispanic" if SRHISPA1 has a value of 1. The columns to the right of the descriptions show the Hispanic and race /ethnicity codes matching each description. The coding for SRRETH1 follows the coding provided in the chart. For example, Hispanic single-race respondents who mark only one of the SRRACEA-SRRACEF are assigned the corresponding code (1-5) from the racial/ethnic categories. Hispanics selecting more than one race are coded 7. Non-Hispanics reporting no race code are coded as missing (-9). The "Unassigned categories (coded as 6 and 14), are not populated in this survey, but are used when the additional response option of "Other" for race/ethnicity are included in the question. The categories for Non-Hispanics are similar, except that

some racial combinations form their own categories (codes 15-18). The remaining combinations reported by Non-Hispanics are coded as 19.

| CODE | RACIAL CATEGORY (SRRETH1) | SR-HISPAI | SR-RACEA | SR-RACEB | SR-RACEC | SR-RACED | SR-RACEE | SR-RACEF |
|------|---|-----------|---|----------|----------|----------|----------|----------|
