

## Technical notes:

- Data source: Defense Civilian Personnel Data System.
  - The corporate data system contains processed records of DoD civilian employees. The posted information was compiled from different files and dates. Employee data (like race) is separate from rating data, and both are separate from performance payout transactions.
  - NSPS performance payout amounts are calculated as percentages of an employee's base salary at the end of his/her appraisal period.
  - Age group is calculated as of the end of employees' appraisal period.
  - Some records had a clear mismatch between rating and payout data. The questionable field is annotated "Anomaly."
- "Department" entry for the Department of the Navy includes the US Marine Corps and is shown as USN/MC.
- "Department" entry for Department of Defense agencies, activities, and organizations other than in the Military Departments is shown as "Other DoD."
- For employees' Privacy Act protection in performance matters, some sanitization of data was necessary:
  - For geographic location, we identify the state/District of Columbia, Overseas, or "All Other" where a component has fewer than 50 employees in the state/D.C.
  - We identify employees as either under 40, or as 40 and above.

## Note:

- The data are those maintained in the automated records system and may be subject to data entry error. The data presented are not collected pursuant to any model designed to analyze the effectiveness of the NSPS Performance Management System.
- Many decisions that affect the size of employees' payouts are decentralized and therefore variable. These include pay pool business rules like break points for performance shares or the split between performance bonus and pay increase, funding rates, and pro-ration of payouts for employees with a short time on the NSPS job.
- Rating decisions are made at the pay pool level. Each of the 974 pay pools in the FY2007 rating cycle has its own composition and concentrations of employees and mix of type and nature of jobs. Many decisions that affect the size of an employee's performance payouts are made at the organization or pay pool level.
