2010 MILITARY FAMILY LIFE PROJECT: TABULATIONS OF RESPONSES

Defense Manpower Data Center
Human Resources Strategic Assessment Program
1600 Wilson Boulevard, Suite 400, Arlington, VA 22209-2593

Acknowledgments

Defense Manpower Data Center (DMDC) is indebted to numerous people for their assistance with the *2010 Military Family Life Project,* which was conducted on behalf of the Office of the Under Secretary of Defense for Personnel and Readiness (OUSD[P&R]). The survey program is conducted under the leadership of (b)(6) (b)(6) Director, *Human Resources Strategic Assessment Program* (HRSAP).

Policy officials contributing to the development of this survey included (b)(6) (b)(6) and (b)(6) (Military Community and Family Policy).

DMDC's Program Evaluation Branch, under the guidance of (b)(6) Branch Chief, is responsible for the development of questionnaires used in the survey program. (b)(6) Chief of Survey Operations, is responsible for the survey database construction and archiving. The lead operations analyst on this survey was (b)(6) supported by (b)(6) Consortium Research Fellow. The lead survey design analyst was (b)(6) and (b)(6) designed the unique presentation of complex items used in this tabulation volume. (b)(6) was supported in these efforts by (b)(6) Consortium Research Fellow.

DMDC's Personnel Survey Branch, under the guidance of Branch Chief, (b)(6) (b)(6) is responsible for developing the sampling and weighting methods used in the survey program. (b)(6) used a customized sampling tool designed for this survey to plan the sample. (b)(6) SRA International, Inc., created the final weights for the survey data. (b)(6) provided programming support for the sampling and weighting tasks. Data Recognition Corporation (DRC) performed data collection and editing.

DMDC's Survey Technology Branch, under the guidance of (b)(6) Branch Chief, is responsible for the distribution of datasets outside of DMDC and maintaining records on compliance with the Privacy Act and 32 CFR 219.

(b)(6) SRA International, Inc., formatted and assembled this tabulation volume using DMDC's Survey Reporting Tool.

2010 MILITARY FAMILY LIFE PROJECT: TABULATIONS OF RESPONSES

Introduction to the Survey

The *Human Resources Strategic Assessment Program* (HRSAP), Defense Manpower Data Center (DMDC), conducts both Web-based and paper-and-pen surveys to support the personnel information needs of the Under Secretary of Defense for Personnel and Readiness (USD[P&R]). These surveys assess the attitudes and opinions of the entire Department of Defense (DoD) community on a wide range of personnel issues. *Human Relations Surveys* are in-depth studies of topics and populations, often requiring both paper-and-pencil surveys and Web-based surveys.

This report contains tabulations of responses from the *2010 Military Family Life Project* (*2010 MFLP*) conducted May 10 to August 31, 2010. This introduction (1) summarizes the survey content, (2) defines the total population surveyed and the subgroups used in tabulations of responses, (3) summarizes the survey methodology,[1] and (4) provides details on how to use the tabulations. The tabulations and a copy of the survey items follow this introduction.

Survey Content

The *2010 MFLP* is DMDC's first survey designed for longitudinal study. Traditionally, DMDC has conducted cross-sectional data collections whereby participants respond to questions at one point in time and are not followed past this time point. While this method of data collection is by far the most commonly used method, limitations of cross-sectional data preclude some types of in-depth analysis. That is, while cross-sectional surveys are able to provide a "snap shot" of how military families are managing the military lifestyle, they do not provide any causal links between specific military-related life events, such as deployments, and resulting changes in well-being. In contrast to cross-sectional data collection, longitudinal analysis follows spouses over time to determine how events impact long-term functioning. A longitudinal analysis of the *2010 MFLP* and it's 2011 follow-up will enhance our understanding of how military-related life changes may specifically effect spouse well-being and family readiness.

The survey was subdivided into the following ten topic areas:

1. *Background Information*—Marital status, member's active duty status, spouse's military service membership, length of marriage, housing location, race/ethnicity, and age.

[1] Details on survey methodology are reported in the *2010 Military Family Life Project: Administration, datasets, and codebook* (2010).

2. *Permanent Change of Station (PCS) Moves*—Number of spouse moves, month and year of most recent PCS move, and length of time of finding employment after last PCS move.

3. *Education and Employment*—Spouse education level and goals, current school/training enrollment, employment status, reasons for not looking for work, length of time looking for work, hours worked per week, reasons for working part-time, civil service employment/career field, resources used to find employment, desire/need to work, and importance of working.

4. *The Military Spouse's Family*—Special medical/educational needs of the family, enrollment in the Exceptional Family Member Program, number of children living in household, stepfamily status, birth date and gender of one child living in household, and attachment behaviors of this one child.

5. *Health and Well-Being*—Perceptions of stress, mental health, and family coping; marital satisfaction and stability; access and use of counseling; and attitudes towards receiving counseling.

6. *Financial Well-Being*—Total household monthly earnings and spouse's monthly earnings, perceived financial condition, saving habits, emergency savings, and use of military-sponsored financial services.

7. *Life in the Military*—Overall satisfaction with military way of life, spouse's support for member staying on active duty, beliefs about the contribution of deployed Service members and the public's support of the war, perceived social support, and use of Military OneSource.

8. *Service Member's Deployments*—Times member deployed in active duty career; deployment to combat zone, spouse's coping with multiple deployments, impact of deployments on spouse and family life, spouse expectations of member's return from deployment, spouse communication with deployed member, and use of commissary and exchange during deployments.

9. *Effect of Deployments on Children*—Identified child's deployment experiences, use of resources and programs during most recent deployment, behavior problems during most recent deployment, spouse need for child care, and child's coping ability.

10. *Reunion and Reintegration*—Service member's wounded status during most recent deployment, timing of service member's return, member's emotional and behavioral state after returning, member's ability to reconnect with children upon return, spouse's readjustment to member's return, spouse's use and satisfaction with available deployment-related resources, spouse's expectation of next deployment, and member's military retention plans.

Population and Reporting Categories

The target population for the *2010 MFLP* consists of spouses of active duty members of the Army, Navy, Marine Corps, and Air Force who (1) have at least six months of service at the time the questionnaire is first fielded and (2) are below flag rank. Spouses of National Guard/Reserve members and warrant officers were excluded from the target population. In addition, for the respondent to remain eligible, they must indicate that, at the time of the survey, they were currently married to an active duty member and not currently a Serice member themselves. Survey results are presented for the total population and by a variety of reporting categories. To form the reporting categories for the tabulations, respondents are classified by administrative record data for member categories of Service, paygrade, enlisted years of service, and the spouse category of gender. The remaining reporting categories are based on survey self-report. Definitions for reporting categories follow:

- *Member Service*—The categories include *Army*, *Navy*, *Marine Corps*, and *Air Force*.

- *Member Paygrade*—The *Enlisted* subgroup includes all enlisted paygrades (E1-E9). The *Enlisted* subgroup is broken into the following groups: *3 to 5 Years of Service* (i.e., first-term decision window), *6 to 9 Years of Service* (i.e., second-term decision window), *E1 – E4*, and *E5 – E9*. The *E1 – E4* category is broken down into *E1 – E3* and *E4*. The *E5 – E9* category is broken into *E5 – E6* and *E7 – E9*. The *Officers* subgroup is broken into *O1 – O3* and *O4 – O6*.

- *Member Deployment Status—Not Deployed Career* includes spouses whose husband/wife had not been deployed for 30 consecutive days or more in their careers.[2] *Deployed Career* includes spouses whose husband/wife had been deployed for 30 or more consecutive days in their careers. *Deployed Career* is further broken down into *Deployed Multiple Times*. This category includes spouses whose husband/wife had been deployed more than once in their careers. *Not Deployed Past 24 Months* includes spouses whose husband/wife had not been deployed in the preceding 24 months. *Deployed Past 24 Months* includes spouses whose husband/wife had been deployed in that time. This category is further broken down into *Currently Deployed*, which includes spouses whose husband/wife were deployed at the time the spouse submitted the survey.

- *Spouse Gender*—This category is self-explanatory.

- *Spouse Race/Ethnicity*—Respondents are classified based on self-reported categories consistent with requirements of the *Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity* (1997). *Total Minority* includes all persons marking one or more of the races other

[2] Member deployment status is based on spouse's survey responses.

than White and/or marking that they are Spanish/Hispanic/Latino. *Non-Hispanic Black* includes persons marking only[3] Black or African American and not reporting being Spanish/Hispanic/Latino. *Hispanic* includes anyone marking that they are Spanish/Hispanic/Latino, regardless of how they answered the question on race.

- *Spouse Education*—Respondents are classified based on self-reported educational attainment. *No College* includes those without any college credit. *Some College* includes those with some college credit, including a two-year degree, but does not include those with a four-year degree. *Four-Year Degree* includes those with a four-year degree and those with some graduate school, but no graduate or professional degree. *Graduate/ Professional Degree* includes those with a masters, doctorate, or other professional degree.

- *Spouse Employment*—Spouses are classified based on self-report of employment status. Categories include *Employed*, *Unemployed*, and *Not in Labor Force*. Those who are included in the *Unemployed* category are spouses who need or want to work and are unemployed (Q15-17). *Not in Labor Force* include those who are permanently or temporarily not working or not actively looking for work.[4]

- *Spouse Location—On Base* includes spouses who reported living in military housing on base. *Off Base* includes spouses who reported living either in military housing off base or in civilian housing.

- *Counseling*—Spouses are divided into two categories. *Counseling in Past 6 Months* included spouses who reported receiving counseling in the past six months. *No Counseling in Past 6 Months* include spouses who reported not receiving counseling in the past six months.

- *PCS Moves—PCS in Past 12 Months* include respondents who reported experiencing a permanent change of station (PCS) within the past year. *No PCS in Past 12 Months* includes those who have not experienced a PCS move within the last year.

- *Spouse Age*—Categories include *Less Than 21 Years Old*, *21 to 25 Years Old*, *26 to 30 Years Old*, *31 to 35 Years Old*, *36 to 40 Years Old*, and *More Than 40 Years Old.*

- *Family Status—C*ategories include *With Child(ren)* and *Without Child(ren). Chid(ren)* are defined as dependents who are under the age of 18.

[3] Persons marking they are Black or African American and another race are not in this category.
[4] Those who have not actively looked for work in the past four weeks are considered to be out of the labor market. This category includes some percentage of spouses who are in the midst of a PCS move and, therefore, only temporarily out of the labor market.

- *Child Demographics*—Respondents are classified based on self-reported gender and age of the child in their household whose birth month is closest to the respondent's birth month. Child age is divided into the following categories: *Less Than 6 Years Old, 6 to 12 Years Old, 13 to 17 Years Old.*

- *Member Service by Paygrade*—The categories include each of the Services by enlisted and officer paygrade groups.

Survey Methodology

The Web survey administration process began on April 27, 2010, with the mailout of notification letters to members of the sample. The notification letter explained why the survey was being conducted, how the survey information would be used, and why participation was important. Throughout the administration period, additional e-mail and postal reminders were sent to encourage survey participation. Data were collected between May 10 to August 31, 2010. Paper surveys were mailed on May 28, 2010 to those who did not respond via the Web.

Single-stage, nonproportional stratified random sampling[5] procedures were used. The sample consisted of the spouses of 101,812 members drawn from the sample frame constructed from DMDC's September 2009 *Active Duty Master Edit File*, September 2009 *Family Database*, September 2009 *Active Duty Pay File*, September 2009 *Basic Allowance for Housing Population File*, and December 2009 *Defense Enrollment Eligibility Reporting System File*. This sample size is larger than would be required to make accurate and stable estimates for spouses in each of the reporting categories. The sample size was increased to ensure an adequate number of spouses were available for the second wave of the *MFLP* (*2011 MFLP*), given the pool of possible respondents would naturally decrease as members leave the military service. Spouses in the sample became ineligible if they indicated in the survey or by other contact (e.g., telephone calls to the data collection contractor) that they were divorced, widowed, or their husband or wife was no longer on active duty, or they are currently a Service member (2.22% of sample).

Completed surveys (defined as 50% or more of the survey questions asked of all participants were answered, including the three eligility questions, Q1, Q2, and Q3) were received from 28,552 eligible respondents. The overall weighted response rate for eligibles, corrected for nonproportional sampling, was 30%.[6]

[5] In stratified random sampling, all members of a population are categorized into homogeneous groups. For example, spouses might be grouped by the gender and Service of their husband or wife (e.g., spouses of all male Army personnel in one group, spouses of all female Navy personnel in another). Within each group, spouses of active duty members are chosen at random. Small groups are oversampled in comparison to their proportion of the population so there will be enough responses from small groups to analyze. Weights are used so that groups are correctly represented in the analyses.

[6] More than two-thirds (67%) of respondents completed the Web version of the survey. For more information on the demographic characteristics of respondents who replied to the Web and paper-and-pencil versions of the survey, please see pages 18-28 of this volume.

Data were weighted using the industry standard three-stage process. This form of weighting produces survey estimates of population totals, proportions, and means (as well as other statistics) that are representative of their respective populations. Unweighted survey data, in contrast, are likely to produce biased estimates of population statistics. The three-stage process of weighting consists of the following steps:

- *Adjustment for selection probability*—Probability samples such as the sample for this survey are selected from lists and each member of the list has a known nonzero probability of selection. For example, if a list contained 10,000 members in a demographic subgroup and the desired sample size for the subgroup was 1,000, one in every tenth member of the list would be selected. During weighting, this selection probability (1/10) is taken into account. The base, or first weight, used to adjust the sample is the reciprocal of the selection probability. In this example, the adjustment for selection probability (base weight) is 10 for members of this subgroup.

- *Adjustments for nonresponse*—Some sampled spouses do not respond to the survey. Continuing the previous example, suppose only half of the spouses sampled, 500, completed and returned a survey. Because the unweighted sample size would only be 500, weights are needed to project the sample up to the subgroup population total (10,000). In this case, the base-weighted respondents would sum to only 5,000 weighted respondents. To adjust for nonresponse, the base weights are multiplied by the reciprocal of the nonresponse rate. In this example, the base weight (10) is multiplied by the reciprocal of the nonresponse rate (2) to create a new weight of 20. The weighted sample sums to the subgroup population total of 10,000.

- *Adjustment to known population values*—The first of the two previous weighting adjustments are applied according to the demographic groupings used in designing the subgroups for the sample. The second is based on population characteristics that are known to be related to whether a sample person responds to the survey. Because the sample design and adjustments for nonresponse cannot take into account all demographic differences related to who responds to a survey and how they respond, auxiliary information is used to increase the precision of survey estimates. For this reason, a final weighting adjustment is computed that reproduces population totals for important demographic groupings related to who responds to a survey and how they might answer the survey. Suppose in our example the population for the subgroup was 8,500 men and 1,500 women but the nonresponse-adjusted weighted estimates from the respondents was 7,000 men and 3,000 women. To dampen this possible bias and reproduce known population totals, the weights would be adjusted by 1.21 for men and 0.5 for women so that the final weights for men and women would be 24.3 and 10, which would give unbiased estimates of the total and of women and men in the subgroup.

Table 1 (pages 8-9) shows the number of respondents and the portion of total respondents in each reporting group. Also shown are the estimated number of spouses and the portion of total spouses in each reporting group. Differences in the percentages of respondents and population for the reporting categories reflect differences in the number sampled, as well as differences in response rates.

Tabulation Procedures

Tabulations[7] for each question in the survey are shown on a set of facing pages. The text of the questions and response options are shown at the top of the even-numbered pages with only the question number repeated on the odd-numbered pages. The central feature of the tabulations is the percentage of spouses choosing the response options indicated by the column heading. Within a set of response options, percentages may not add to 100% due to rounding error.

Where an item can be presented as an average, that average is shown as a number estimate and in a bar chart. The averages lend themselves to a quick scan for reporting groups differing from other similarly defined groups. Where a true response continuum is available (e.g., number of children), the mean of that continuum is presented; in other cases, the responses are averages of the numeric scales presented with the response options. Where there is a simple binomial response (e.g., *Yes*/*No*), only one percentage is presented. In this case, the bar chart represents that percentage unless specified in the footnote. When multi-level response scales (e.g., *Yes*, *No*, *Does not apply*) are dichotomized in the bar chart, the footnote may specify that the bar chart represents percentages derived from the calculation of one column (e.g., *Yes*) divided by a denominator that excludes one or more columns (e.g., *Don't know*). For example, Q69c asks spouses whether their child participated in summer and/or afterschool programs during their husband/wife's recent deployment. Spouses were able to mark *Yes*, *.No*, or *Does not apply* (e.g. for those with children too young to be able to participate in such programs). The tabulation shows percentages for each response option as well as a bar chart which reflects the percentage of spouses who marked *Yes*. However, the bar chart percentage excludes those who marked *Does not apply*. Thus, it represents the percentage of spouses who marked *Yes* out of those spouses who reported this subitem applied to them (e.g. of those who marked *Yes* or *No* only).

On each page of tabulations, the first column lists the reporting group shown in that row. The second column, *Percent Responding*, lists the portion of the reporting group represented in the estimates in that row. In most cases, if this percentage is not 100, it reflects item nonresponse due to skip patterns, and the table note indicates that "Percent responding are active duty member spouses who answered the question."

Not all questions will apply to every respondent. Respondents to the paper version of the survey are instructed to skip questions that do not apply to them (based on their answers to previous questions). Where possible, the Web survey is programmed to skip respondents over questions that do not apply to them. For example, Q58 asks spouses whether their husband/wife's most recent deployment had been to a combat zone. This question does not apply to those who marked in Q56 that their spouse has not ever been deployed. The table note for this question indicates that the "Percent responding are active duty member spouses who answered the question and whose husband/wife had been deployed (Q56)."

It is often not practical to skip respondents out of every survey item that does not apply to them. For these items, *Does not apply* responses are often tabulated separately. For example, Q71 asked spouses if there was a change in need for child care as a result of the member's most recent deployment. Responses of *Does not apply, I have not used child care* were tabulated separately as responses to the constructed question, *Have you used child care?* In other cases, the *Does not apply* or *Not applicable* responses are tabulated with the other response categories. For example, Q65a asked spouses if they shopped less often at the commissary during their husband/wife's most recent deployment. Respondents can select *Does not apply, I do not shop at the commissary* indicating that they did not shop at the commissary before the deployment and therefore would not have shopped more or less. This percentage is included in the tabulation page with options for *Yes* and *No*.

Because the survey contains open-ended questions, not all responses are tabulated. For example, if spouses indicated that their family required special medical or educational needs (Q27) but did not enroll in the Exceptional Family Member Program (EFMP; Q28), they were asked to explain their reasons for not participating in EFMP. Since it is not feasible to tabulate the wide range of responses, the open-ended responses for Q28 are not tabulated.

Paper and Web Survey Comparability

On occasion, the paper and Web versions of the survey differ. These differences result from the technological advantages and requirements available in a Web-based survey. Question stems differ slightly between the paper and Web versions of the survey. On the paper version of the survey, question stems will refer to specific survey items, whereas questions on the Web version are not numbered.

In addition to variations in the question text between the paper and Web versions of the survey, the survey response options also differ at times. A common difference between the surveys is the use of *Does not apply* response options on the paper version that are unnecessary in the Web version due to "smart skip" technology. For example, in Q76 of the paper version, respondents are asked the month, day, and year their spouse most recently returned home from deployment. Spouses could either enter the appropriate month, day, and year or mark *Does not apply, hasn't returned*. On the Web version, respondents were asked in a preceding question whether their spouse had returned home from a deployment. If respondents answered

No to this question (Q75) on the Web survey, they were automatically skipped over the question asking the month, day, and year their spouse had most recently returned (Q76).In constructing the dataset that combines the paper and Web respondents, questions from the Web version were typically used. The responses to the paper-and-pencil version of the questions were recoded to comply with the Web version. Exceptions may occur when the tabulation of a survey item would benefit from presenting responses in a manner representative of the total population, as opposed to only the applicable population, by coding respondents who were skipped over the question to force their inclusion.

Combining Information From Multiple Items or Response Options

Tabulations in this volume generally present data for individual survey questions.[8] There are four exceptions. The first type of exception is where the results for multiple items are presented on a single set of pages.

- In Q25a-b, spouses were asked if they wanted (Q25a) or needed (Q25b) to work. The tabulation shows percentages who answered Q25a and Q25b on one set of pages, so as to allow comparison between the percentages.

The second exception is where spouses can provide multiple answers to a single question (e.g., race).

- In Q7, spouses were asked to mark one or more races. The tabulations show the percentage who responded that they were *White, Black or African American, American Indian or Alaska Native, Asian,* or *Native Hawaiian* or *Other Pacific Islander*. Respondents who indicated more than one race are also shown in the percentage of *More Than One Race.* For example, if a respondent indicated they were *Asian* and *White*, they were counted in the percentage as *Asian*, *White*, and *More Than One Race.*

The third exception pertains to combining response options from a single item to present an aggregate number.

- For example, Q56, asked spouses if their husband/wife had been deployed for more than 30 consecutive days. Spouses could indicate *Yes, in the past 24 months*, *Yes, but not in the past 24 months*, or *No*. In addition to the tabulation showing the percentage of those who marked these response options, a composite tabulation shows the total percentage of those who responded to either *Yes* option and reflects *Percent Deployed During Career*.

[8] Demographic information based on member administrative data is also presented. For example, member Service, paygrade, and spouse gender were constructed from administrative data.

The fourth exception pertains to constructed composite measures (e.g., scales, incident rates, summary variables) described below. With the exception of spouse employment, individual items in each measure are presented first followed by tabulation pages showing composite measure results.

- *Spouse Employment*—Spouse employment indicators are derived from Q15-17 and are comparable to employment measures used in the U.S. Census Bureau's *Decennial Census* and *Current Population Survey (CPS).* Two sets of tabulations are presented. In the first set, labor force participation is shown for the spouses of those in the reporting category. The three categories contain percentages of (civilian) employed, unemployed, and not in the labor market. Those not in the labor market include those who are permanently or temporarily not working or not actively looking for work.[9] The second set of data shows only those in the labor market. That is, the percent responding are spouses who answered the items and are in the labor market (civilian employed and unemployed but looking for work). The unemployment rates shown in these tables are the percent of those who need or want to work and are unemployed. These rates are comparable to those reported monthly by the Bureau of Labor Statistics based on the *CPS* data.

- *Attachment Behavior Index (AQS)*—The *AQS* is used to measure insecurity of children in military families. A benefit of the *AQS* is its applicability across a range of age groups from young toddlers to adolescents. The *AQS* has been shown to be a valid measure of child's markers of insecurity as indexed by the child's behavior based around a specific caregiver. The scale is constructed from Q35a-f, with Q35a reverse coded. Spouses must have responded to all of the subitems in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 5). Higher scores indicate higher levels of insecurity in children. For details, refer to *Waters, Vaughn, Posada, & Kondo-Ikemura* (1995).

- *Patient Health (PHQ-4)*—The *PHQ-4* is designed to identify potential mental health concerns by measuring the extent that spouses have felt negative emotions, such as depression, anxiety, or nervousness, in the two weeks before taking the survey. This scale is constructed from Q37a-d and spouses must have responded to all of the subitems in the scale to be included. Each item is rated on a 1 to 4 scale. Scores on the *PHQ-4* are reported as a single figure, which is the average of the individual scores. A higher total score indicates a higher likelihood of mental illness. For details, see *Kroenke, Spitzer, and Williams* (2001).

[9] Those who have not actively looked for work in the past four weeks are considered to be out of the labor market. This category includes some percentage of spouses who are in the midst of a PCS move and, therefore, only temporarily out of the labor market.

- *Family Crisis Oriented Personal Evaluation Scale (F-COPES)*—The *F-COPES* measures a variety of coping behaviors and problem solving strategies that respondents may indicate they and their families use in times of stress or crisis. This scale is constructed from Q38a-u and spouses must have responded to 90% of the subitems in the scale to be included. Each item is rated on a 1 to 5 scale. Scores are reported as a single figure, which is the average of the individual scores. Q38r and t are reverse coded in the construction of the overall score. A higher total score indicates better ability to cope with stressful situations. In addition, the *F-COPES* has five subfactors (McCubbin, Olson, & Larsen, 1996).[10] These subfactors include *Aquiring Social Support* (Q38a, b, e, g, i, & u; measures an individual's reliance on family and/or friends during difficult times), *Reframing* (Q38c, k, m, o, & q; measures an individual's ability to view a difficult situation in a more positive way or by accepting difficulties as a part of life), *Seeking Spiritual Support* (Q38j, p, & s; measures an individual's use of spiritual resources, such as church, and/or the use of spiritual advisors, such as church-based counseling, during difficult times), *Mobilizing to Acquire and Accept Help* (Q38d, f, h, & n; measures an individual's ability to cope with difficulties by seeking out and accepting help from others such as friends, other military families, health providers, etc.), and *Passive Appraisal* (Q38r & t; measures an individual's inability to cope with difficult situations or crises due to an avoidant interpretation of the challenging situation, such as believing if they wait long enough, the problem will go away). Scores are reported using the average of the subitems in each subfactor. Q38l is included in the overall score, but researchers have not included this item in the construction of subfactors (McCubbin et al., 1996). Respondents must have answered all of the subitems within each subfactor to be included in that specific score. Each of these subfactors are presented as separate tab pages. With the exception of *Passive Appraisal,* higher scores on subfactors indicate more frequent use of these positive coping strategies. For *Passive Appraisal,* higher scores also indicate more frequent use of this coping strategy, but research as found that the use of *Passive Appraisal* is not conducive to effective coping and is therefore considered a negative coping strategy. For details on the *F-COPES*, see *McCubbin, Olson, and Larsen* (1996).

- *Marital Instability Index (MII)*—An abbreviated version of the *MII* is used to capture the extent that respondents perceive problems in their marriages. The scale is constructed from Q41a-e and respondents must have answered all of the subitems in the scale to be included. Each item is rated on a two-point scale (yes/no). Scores are reported as a single figure, which is the sum of the individual scores (range 0 to 5). A higher score indicates a greater amount of perceived problems within the marriage. For more details, see *Edwards, Johnson, and Booth* (1987).

[10] A principal component analysis was conducted, using promax rotation, to replicate these findings. Analyses indicated almost identical clusters.

- *Social Support Index*—The *Social Support Index*, derived from items Q54a-r, captures the degree to which spouses have a community or network of people, other than their spouse, who they can depend on and who can provide companionship and assistance. Respondents must have answered 90% of the subitems in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 5). A higher total score indicates greater perceived support. In addition, the *Social Support Index* has four subfactors reviewed in the literature (McCubbin, Patterson, & Glynn, 1991).[11] These factors include *Community as a Source of Support* (Q54b, e, g, l, & n; measures an individual's belief that the community offers supportive resources during difficult times and that individuals feel secure living in the community), *Emoltional, Esteem, and Friendship Network* (Q54f, i, p, & q; measures an individual's reliance on friends for emotional support and for increasing self-esteem), *Family Community Connection* (Q54h, j, k, o, & r; measures an individual's belief that community members and family members mutually support and understand each other), and *Family Affection and Commitment* (Q54a, c, d, & m; measures an individual's belief that family members support and show affection for each other). Q54h, j, k, n, o & r are reverse coded in both the construction of subfactors and the construction of the overall score. Scores are reported using the average of the subitems in each subfactor. Respondents must have answered all of the subitems within each subfactor to be included in that specific score. Each of these subfactors are presented as separate tab pages. Q54a is not a question in the traditional *Social Support Index* but was added for the purpose of this survey. Principal component analysis indicated Q54a loaded significantly on the first factor of *Acquiring Social Support* and was therefore included in this group. For each subfactor, higher scores indicate higher perceived support in that specific network.

- *Child Behavior Checklist*—The *Child Behavior Checklist* was created by DMDC to capture the potential problematic behaviors in children during the husband/wife's deployment, including academic and behavioral problems. Traditional scales that capture these behaviors are difficult to use due to the range of ages this scale needed to cover (ages 0 to 17). DMDC created this scale as a way of measuing problem behaviors across this age range. The scale is constructed from Q70a-g and respondents must have answered all of the subitems in the scale to be included. Q70d, f, and g are reverse coded in the construction of the overall score. The score is built by summing the presence/absence of the behavier (*Yes* has the value 1 and *No* and *Not applicable* have the value of 0). Scores are reported as a single figure, which

[11] A principal component analysis was conducted, using promax rotation, to replicate these findings. Analyses indicated almost identical clusters.

is the sum of the individual scores (range 0 to 7). A higher score indicates a higher incident of problematic behaviors.[12]

Margins of Error

The complex sample design required weighting to produce population estimates (e.g., percent female).[13] Because of the weighting, conventional formulas for calculating the margin of error will overstate the reliability of the estimate. For this report, variance estimates were calculated using SUDAAN® PROC DESCRIPT (Research Triangle Institute, Inc., 2004).

By definition, sample surveys are subject to sampling error. Standard errors are estimates of the variance around population parameters (such as percentages or means) and are used to construct margins of error (i.e., confidence interval half-widths). Percentages and means in these tabulations are reported with margins of error based on 95% confidence intervals. In order to compress the data display, only the maximum margin of error (Max ME) for each reporting category is shown. That is, the tab volume shows only the largest margin of error for the percentages or means in each row. For each average shown in these tabulations, its margin of error is also printed.

The following reporting conventions are used:

- "0" indicates that no one in any reporting group selected the response option,
- NR indicates the estimate is *Not Reportable* and is suppressed because of low reliability. Estimates of low reliability are suppressed based on criteria defined in terms of nominal sample size (less than 5), effective sample size (less than 30), or relative standard error (greater than 0.225),
- NA indicates the question was *Not Applicable* because the question did not apply to respondents in the reporting category based on answers to previous questions,
- no Max ME is printed when all percentages in the row are shown as NR,
- no margin of error is printed for an average when it is shown as NR.

[12] To validate the scale, principal components analysis (PCA) was conducted using promax rotation. This analysis indicated that all subitems loaded on a single figure with eigenvalues greater than 1.
[13] This differential weighting means that only certain statistical software procedures, such as SUDAAN® PROC DESCRIPT, correctly calculate standard errors, variances, or tests of statistical significance for stratified samples.

38. Passive Appraisal: Constructed from Q38r & t. Subfactor of Family Crisis Oriented Personal Evaluation Scale (F-COPES). Measures an individual's inability to cope with difficult situations or crises due to an avoidant interpretation of the challenging situation (e.g. believing if they wait long enough, the problem will go away).

PRIVACY ACT STATEMENT & INFORMED CONSENT INFORMATION

In accordance with the Privacy Act, this notice informs you of the purpose of the survey and how the findings of these surveys will be used. It also provides information about the Privacy Act and about informed consent. Please read it carefully. **Returning this survey indicates your agreement to participate in this research.**

AUTHORITY: 10 United States Code Sections 136, 1782, and 2358.

PRINCIPAL PURPOSE: Information collected in this survey will be used to research the effects of the deployment cycle on the family, financial well-being, and views of military life. This information will assist in the formulation of policies which may be needed to improve the working environment. Reports will be provided to Department of Defense (DoD), each Military Department, and the Joint Chiefs of Staff. Findings will be used in reports and testimony provided to Congress. Some findings may be published by the Defense Manpower Data Center (DMDC) or in professional journals, or presented at conferences, symposia, and scientific meetings. Data could be used in future research. Datasets without any identifying information may be analyzed by researchers outside of DMDC. Briefings and reports on results from these surveys will be posted on the Web: http://www.dmdc.osd.mil/surveys/

ROUTINE USES: None.

DISCLOSURE: Providing information on this survey is voluntary. Most people can complete the survey in 16-30 minutes. There is no penalty or loss of benefits to which you are entitled if you choose not to respond. However, maximum participation is encouraged so that the data will be complete and representative. Your survey responses will be treated as confidential. Identifying information will be used only by government and contractor staff engaged in, and for purposes of, the survey research. For example, the research oversight office of the Office of the Under Secretary of Defense (Personnel and Readiness) and representatives of the U.S. Army Medical Research and Materiel Command are eligible to review research records as a part of their responsibility to protect human subjects in research. This survey is being conducted for research purposes. In no case will individual identifiable survey responses be reported. If you answer any items and indicate distress or being upset, etc., you will not be contacted for follow-up purposes. However, if you indicate a direct threat to harm yourself or others within responses or communications about the survey, because of concern for your welfare, DMDC will notify an office in your area for appropriate action.

SURVEY ELIGIBILITY AND POTENTIAL BENEFITS: DMDC uses well-established, scientific procedures to randomly select a sample that represents the Defense community based on combinations of demographic characteristics (e.g., deployment status, service and gender). This is your chance to be heard on issues that directly affect you, including how deployment impacts you and your children. While there is no direct benefit for your individual participation, your responses on this survey ***make a difference.***

STATEMENT OF RISK: The data collection procedures are not expected to involve any risk or discomfort to you. The only risk to you is accidental or unintentional disclosure of the data you provide. However, the government and its contractors have a number of policies and procedures to ensure that survey data are safe and protected. For example, no identifying information (name, address, Social Security Number) is ever stored in the same file as survey responses. Survey data may be shared with organizations doing research on DoD personnel but only after minimizing detailed demographic data (for example, paygrade and detailed location information) that could possibly be used to identify an individual. A confidentiality analysis is performed to reduce the risk of there being a combination of demographic variables that can single out an individual. Government and contractor staff members have been trained to protect client identity and are subject to civil penalties for violating your confidentiality.

If you have questions about the survey, please contact the Survey Processing Center by sending an e-mail to MFLP@osd.pentagon.mil or call, toll-free, 1-800-881-5307. If you have concerns about your rights as a research participant, please contact: Ms. Caroline Miner, Human Research Protection Program Manager for the Office of the Under Secretary of Defense (P&R), HRPP@tma.osd.mil (703) 575-2677.

If you desire to withdraw your answers, please notify the Survey Processing Center prior to August 16, 2010. Please include in the e-mail or phone message your name and ticket number. Unless withdrawn, partially completed survey data may be used after that date.
